

**The Submersible Borehole Pump Range**

## Applications

- Domestic and general water supply
- Irrigation and spray irrigation
- Lowering groundwater levels
- Fountains
- Pressure boosting
- Air-conditioning systems
- Fire protection
- Cooling water cycles

## Operating Data

Capacity	Q up to 16 m <sup>3</sup> /h (4.4 l/s)
Head	H up to 300 m
Temperature of fluid handled	t up to +30 °C in continuous operation
Power	Pn up to 5.5 kW

## Pump Type / Design

### Pump:

Stainless steel and plastic multistage centrifugal pump.

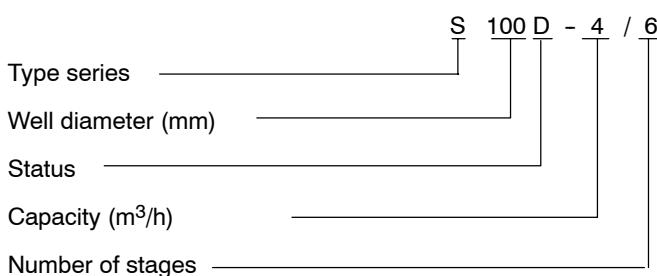

- Additional bearing depending on the number of stages
- Pump sizes D1 and D2 with anti-blockage feature. This consists of a hexagonal polyurethane disc mounted to the back of the diffuser. A PE-HD ring fitted to the impeller front side sits close to the disc. The impeller hub is protected by a polyurethane ring. This design improves the starting torque of low-capacity pumps and has the effect that solid particles such as sand are propelled outside instead of clogging the pump.

### Motor:

Submersible canned motor (Franklin), NEMA standard, 50 Hz

- For single-phase alternating current (type PSC) or three-phase current
- With short cable
- Connection to power supply mains by means of cable connector (accessories)
- D.o.l. starting, start-up frequency up to 20/h
- Type of enclosure IP 68
- Thermal class B

## Designation

## Recommended Accessories

**UPA Control:** Control box for motor and dry running protection by immersion electrodes.

**Automatic control unit:** in conjunction with the Controlmatic E or Cervomatic EDP control and monitoring units, which protect the pump against dry running, if the water level falls, S 100D can be used for automatic water supply

## Certification

Quality management certified to ISO 9001

## Submersible Borehole Pumps

for Well Diameters  
of 100 mm (4 inch)

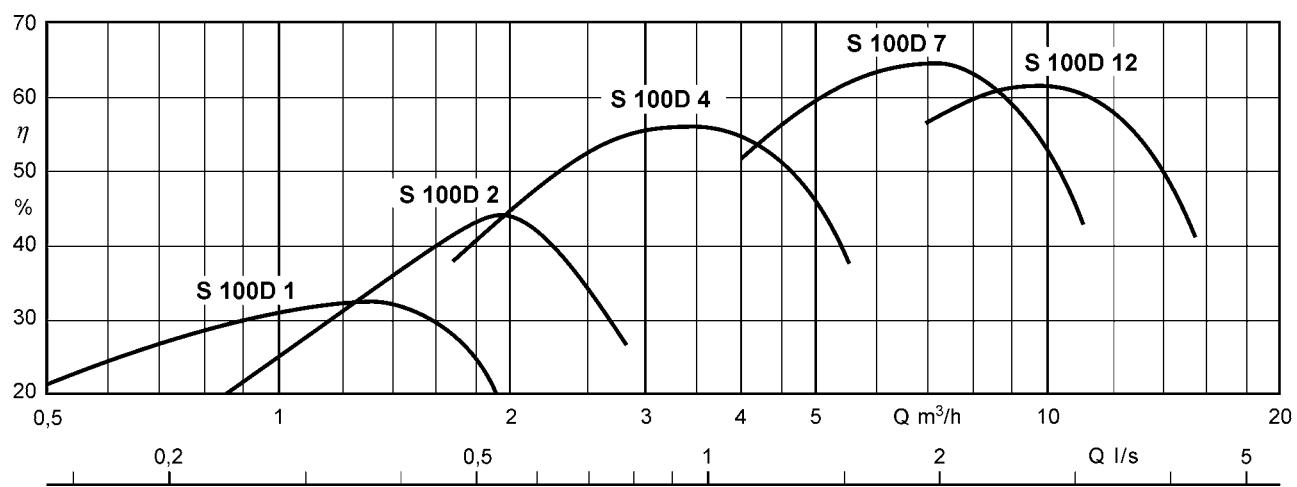

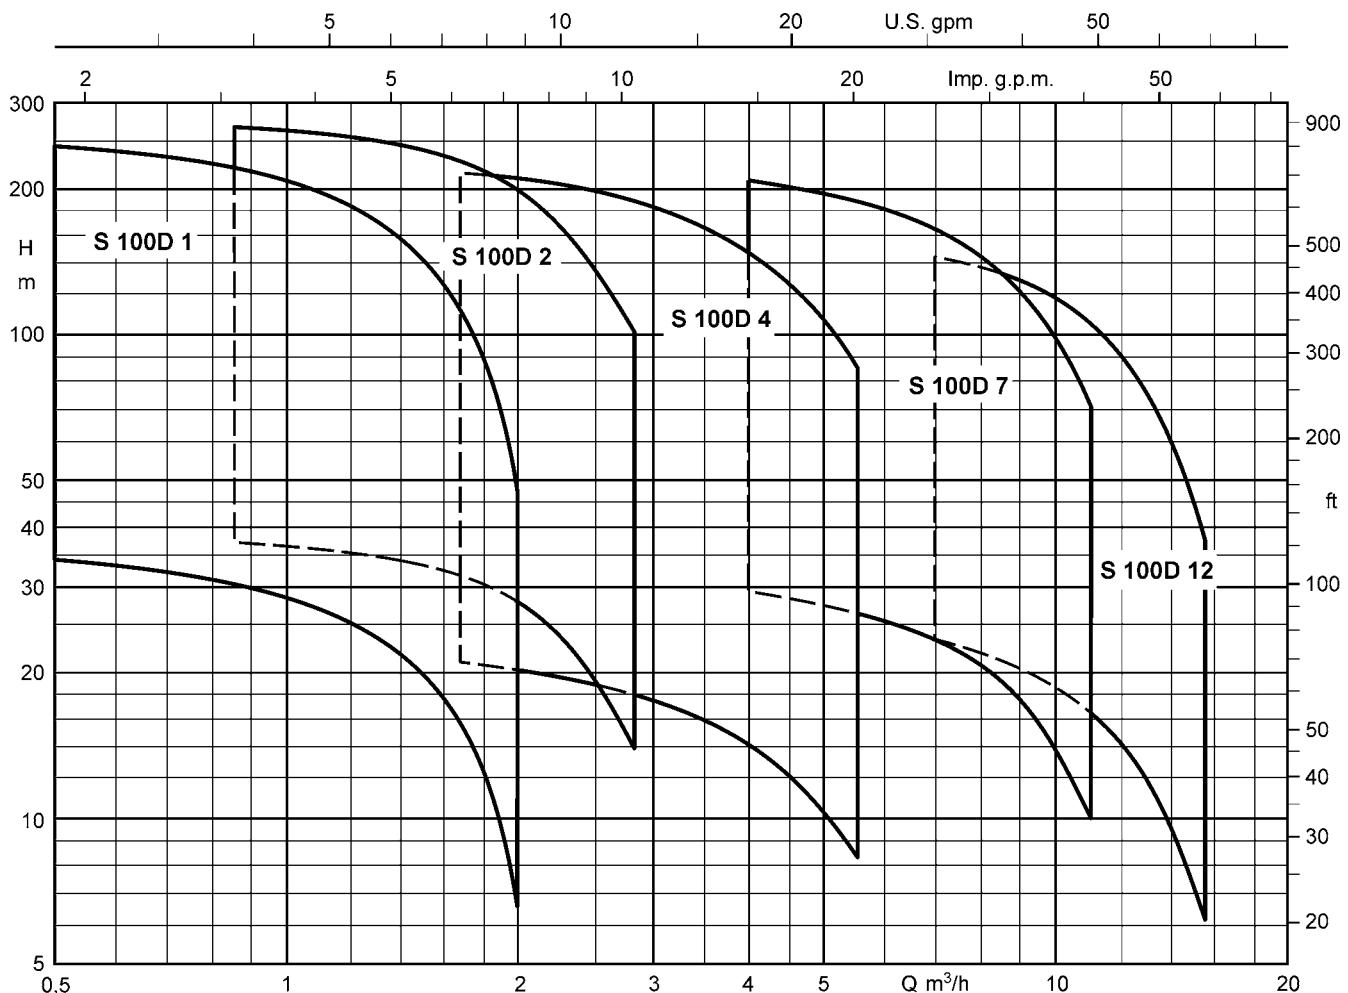

### Available automation products:

- Automatic control unit

## Product Features

- Pumps sizes D1 and D2 with anti-blockage feature
- Rust-proof
- Suitable for installation in narrow deep wells
- High efficiency
- Hermetically sealed motor
- Motor designed for maximum pump output
- Low noise level
- For vertical, angled or horizontal installation

## Selection Chart (Ranges on Offer)

 $n \approx 2900 \text{ rpm}$ **Note:**

Up to a motor rating of  $P_N = 2.2 \text{ kW}$ , all pump sizes can be supplied with either single-phase a.c. or three-phase current motors.

## Materials

Component	C1
<b>Pump ...</b>	
Outer pump casing/ Suction casing / Valve housing	CrNi steel (1.4301)
Stage casing	CrNi steel (1.4301)
Stage casing (diffuser) / Impeller	glass fibre reinforced Noryl (PPO GF20V)
Shaft	Cr-steel (1.4021)
Bearing bush	Nitril NBR 80
Screws, bolts and nuts	CrNiMo-steel (A4-70)
<b>Motor ...</b>	
Shaft	CrNi steel (1.4305)
Bearing carrier	CrNi steel (1.4301)
Stator case	CrNi steel (1.4301)

## Bearings / Lubrication

Plain bearings, lubricated by the fluid pumped or by the motor fill liquid. Depending on the number of stages, an additional intermediate bearing is provided in the pump.

The axial thrust is balanced by a thrust bearing in the motor. The hydraulic thrust is balanced by the pump's counter thrust bearing.

## Direction of Rotation of the Pump

Clockwise rotation (viewed at the drive shaft end).

## Pump End (Discharge Nozzle)

S 100D - 1, 2, 4 + 7: Internal thread G 1<sup>1</sup>/<sub>4</sub>" (DN 32).  
S 100D - 12: Internal thread G 2" (DN 50).

## Installation

Vertical and, depending on the number of stages, also angled and horizontal installation.

## Drive

Type	canned motor in squirrel-cage design, 2 poles
Connection	NEMA standard
Type of enclosure	IP 68
Frequency	50 Hz
Type of current	single-phase a.c. (1 ~) or three-phase (3 ~)
Rated voltage U	220 ... 230 V (1~) and 380 ... 400 V (3~)
Rated power P <sub>N</sub>	up to 2.2 kW for 1~ and up to 5.5 kW for 3~
Voltage fluctuation	up to $\pm 5\%$ acc. to VDE
Frequency of starts	up to 20/h
Min. delay before restarting	. 3 min

A starter for **single-phase a.c. motors** in PSC design (with integrated run capacitor and motor protection) is included in the scope of supply.

## Connection to Power Supply

All DN 100 motors are factory-equipped as follows:  
1 x 1.5 m flat cable, quality 4 x 1.5 mm<sup>2</sup> (3 phases + 1 earth conductor).  
Exception: DN 100 motors with a rating of 5.5 kW, 3~, are equipped as follows: 2.5 m cable, quality 4 x 1.5 mm<sup>2</sup>.

Connection of extension cable (any length) by means of a cable connector

Connected at the factory by means of a **standard cable connector (non-separable, shrink tube)**

Ident. No.	40 980 708
	For cable quality 4 x 1.5 mm <sup>2</sup> or 4 x 2.5 mm <sup>2</sup>
Ident. No.	39 020 536
	For cable quality 4 x 4 mm <sup>2</sup>

Connected at the factory with **Franklin cable connector (separable, sealing compound)**

Ident. No.	90 049 385
	For cable quality 4 x 1.5 mm <sup>2</sup> up to 4 x 2.5 mm <sup>2</sup>

## Starting Mode

Only direct on line.

## Temperatures

The **S 100D** submersible borehole pump is designed for use in water with temperatures of up to t = + 30 °C.

## Variants Available on Request

- Higher fluid temperatures
- Higher voltages up to 500 V
- Other frequencies

## Applications

- Domestic and general water supply
  - Irrigation and spray irrigation
  - Lowering ground water levels
  - Fountains
  - Pressure boosting
  - Air-conditioning systems
  - Fire protection
  - Cooling water cycles
- Maximum permissible amount of suspended sand: 50 g/m<sup>3</sup>

## Operating Data

Capacity	Q	up to 15 m <sup>3</sup> /h (250 l/min)
Head	H	up to 400 m
Temperature of fluid handled	t	30 °C
Motor ratings	P <sub>N</sub>	up to 7.5 kW

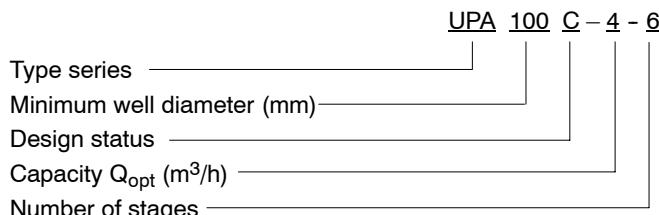

## Design

**Multistage centrifugal pump** with components made of stainless steel and additional bearing for each stage. The stage casings are connected by means of tie bolts on radial pumps, and by means of studs on mixed-flow pumps.

**Submersible canned motor:** Franklin Electric pre-filled motors, corrosion free, NEMA shaft end, 50 Hz

- Single-phase and three-phase motor type Super Stainless
- With separate lead
- Direct starting, max starts per hour: 20
- Type of enclosure: IP 68
- Insulation: Class B

## Designation (Example)

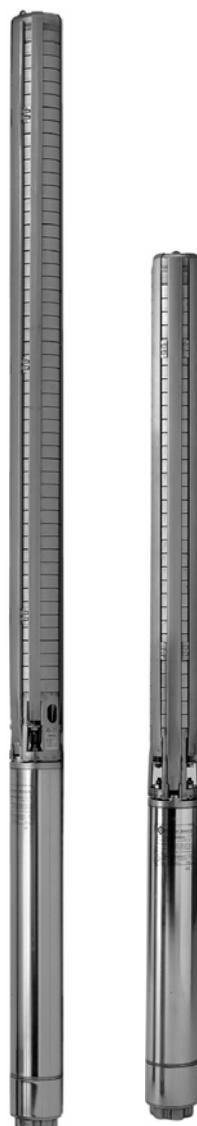

## Certification

Quality management certified to ISO 9001

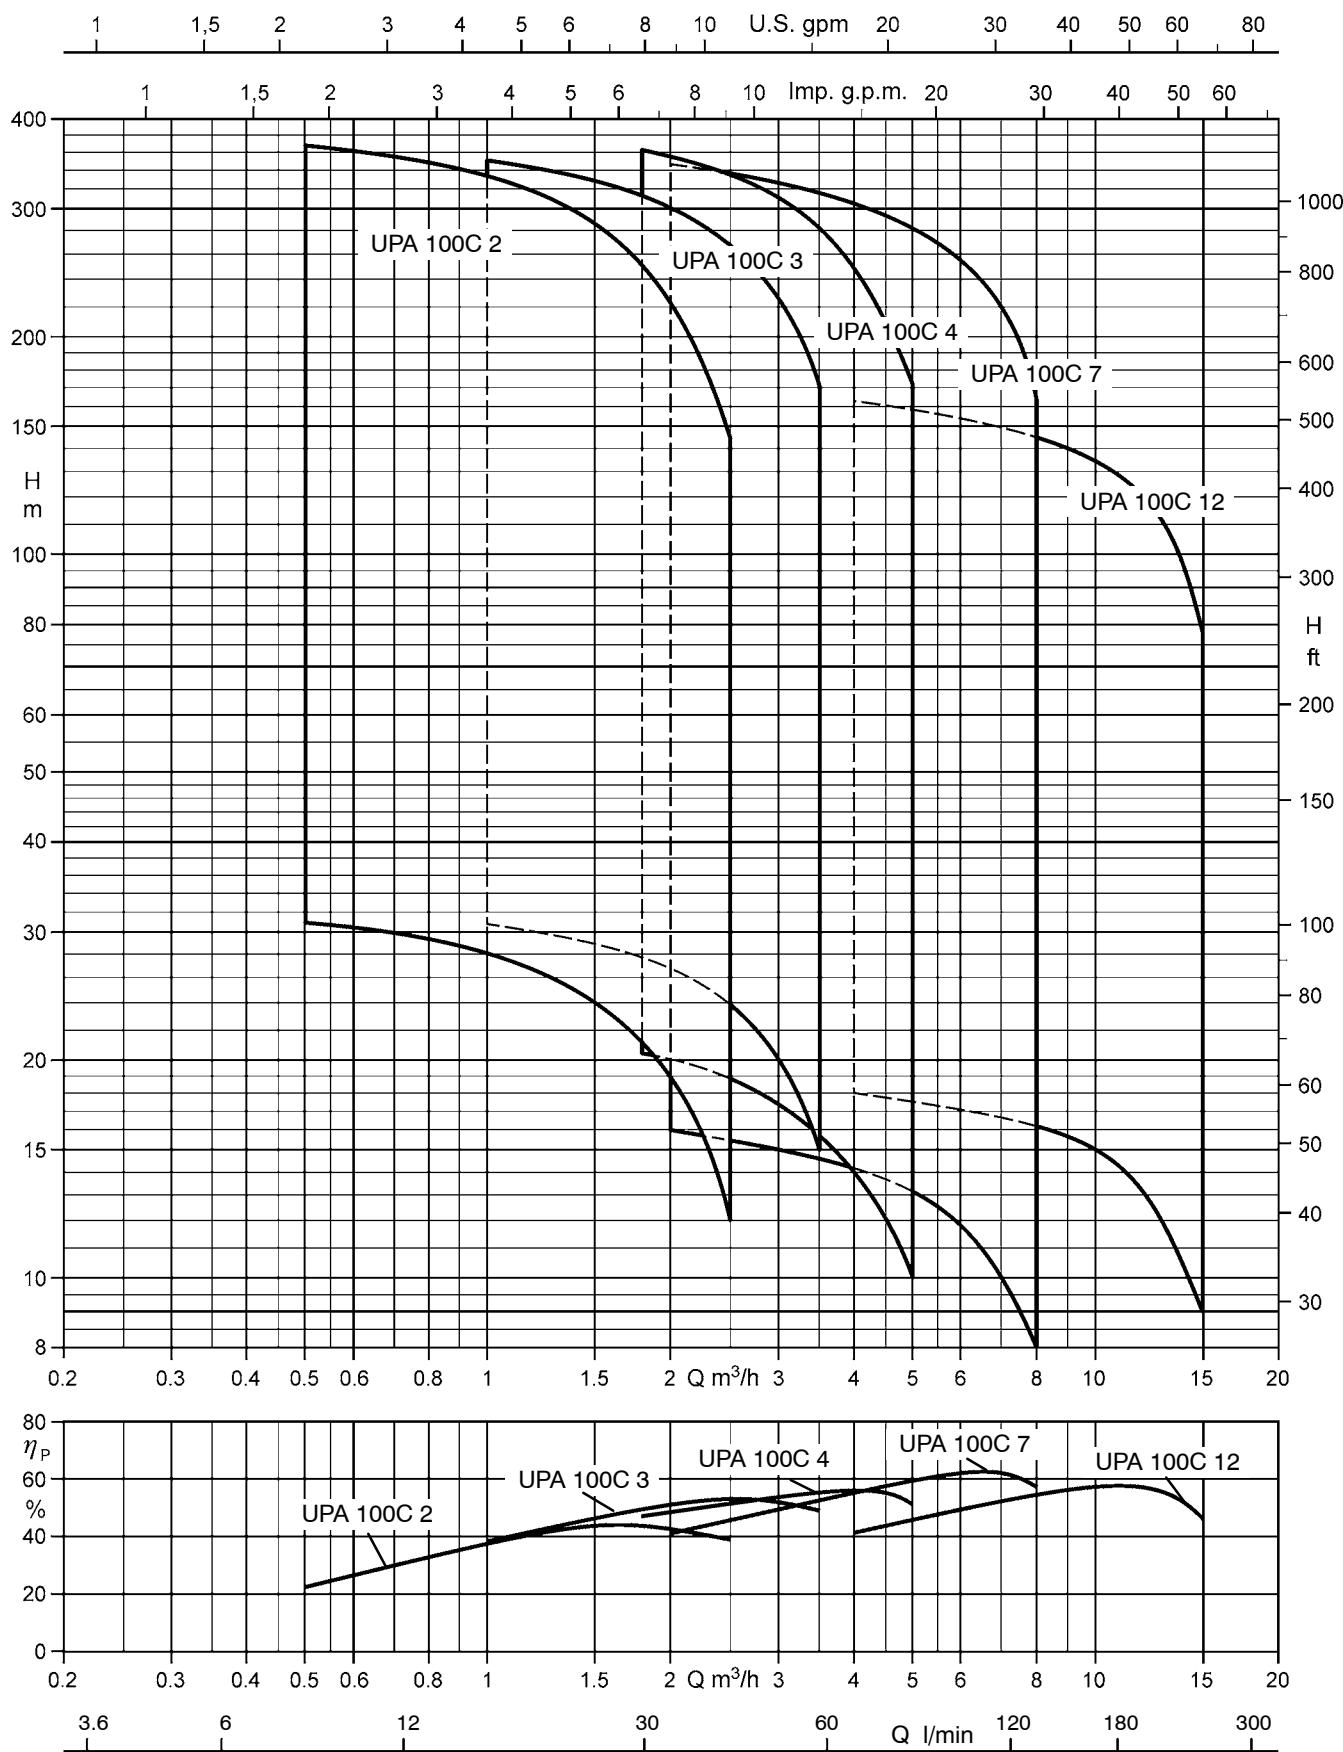

## Submersible Borehole Pumps

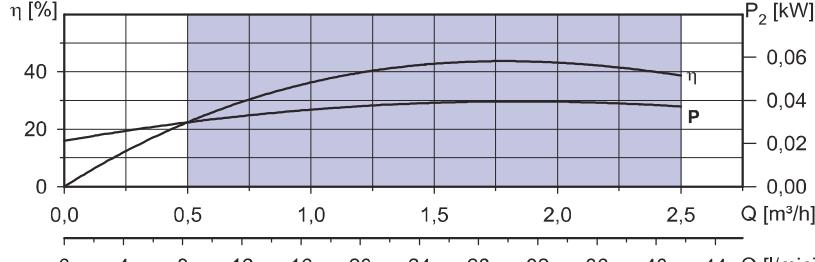

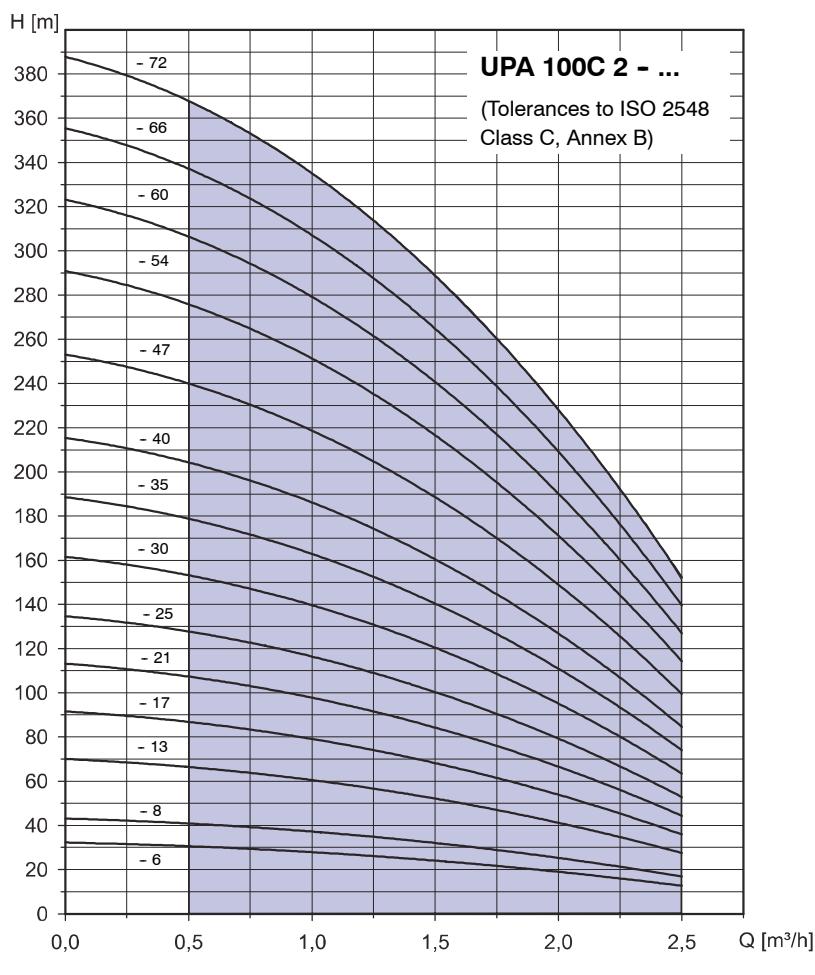

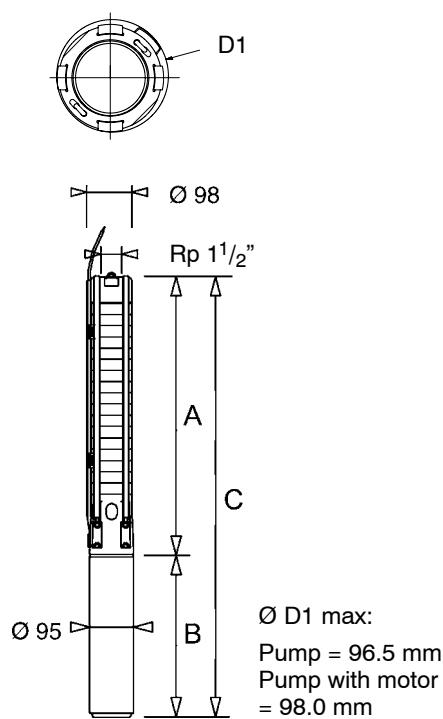

for Well Diameters of  
100 mm (4 inches)

## Product Features

- Very sturdy design
- All components made of stainless steel
- Suitable for installation in narrow deep wells
- High efficiency
- Totally enclosed motor
- Motor designed for maximum pump output
- Low noise level
- For vertical or horizontal installation
- Check valve protected against blocking
- Pre-filled motor; no risk of contamination of the pumped water

**Selection Chart** (Ranges on offer) $n \approx 2900 \text{ rpm}$ 

**UPA 100C 2 - ...**

Operating range: 0.5 – 2.5 m<sup>3</sup>/h

Q<sub>min</sub> = 0.5 m<sup>3</sup>/h

Q<sub>max</sub> = End of characteristic curve

<sup>1)</sup> Capacitor run motors (PSC motors) with starter.

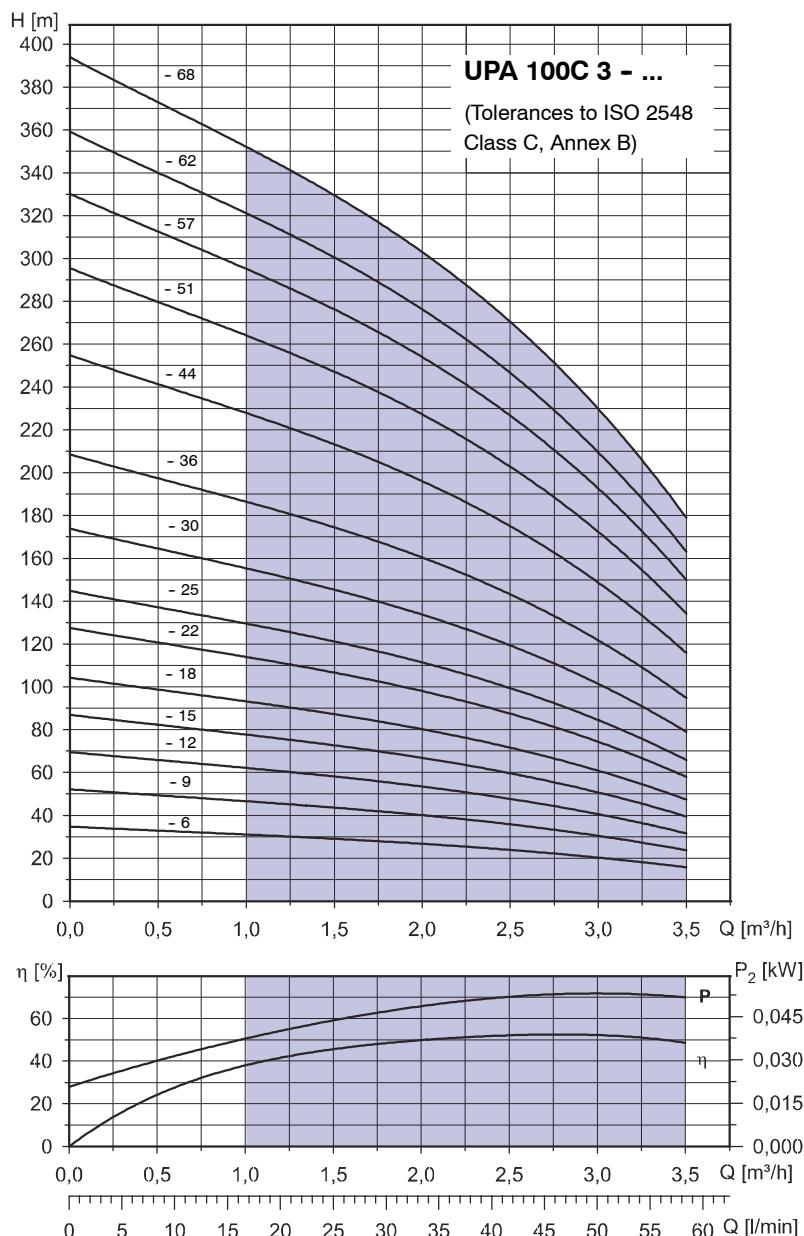

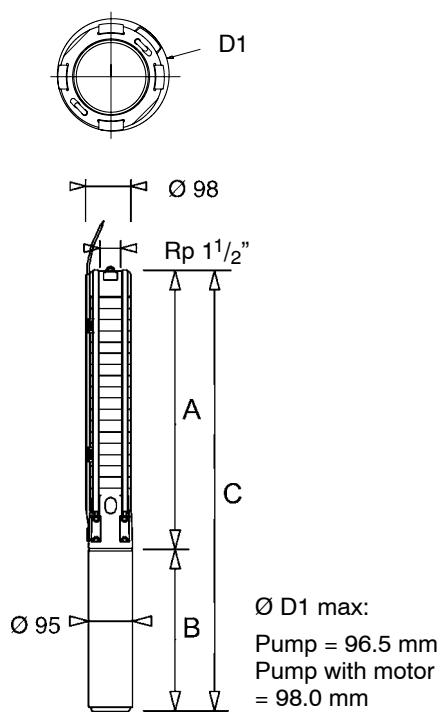

The characteristic curves shown are for preliminary selection only.  
Exact selection data will be provided in our quotation.

## Applications

Suitable for handling clean or slightly contaminated water in applications such as:

- domestic water supply
- general water supply
- irrigation and spray irrigation systems
- artificial lowering of the ground water level as well as
- heat transfer plants

In addition, the pump sets are used in pressure boosting systems, air-conditioning systems, fountains, etc.  
Permissible sand content in the fluid handled: 50 g/m<sup>3</sup>.

## Operating Data

Capacity ..... Q up to 79 m<sup>3</sup>/h  
Head ..... H up to 570 m  
Temperature of fluid handled . t up to 50 °C  
Speed ..... n 2900 rpm

## Design

**Multistage centrifugal pump** with components made of stainless steel and additional bearing for each stage. The stage casings are connected by means of tie bolts.

### Motor

Canned or wet submersible squirrel-cage motor, 2 poles; NEMA shaft end; 50 Hz; type of enclosure: IP 68

## Designation (Example)

UPA 150 C - 16 / 9

Type series \_\_\_\_\_

Minimum well diameter (mm) \_\_\_\_\_

Design status \_\_\_\_\_

Capacity (m<sup>3</sup>/h) \_\_\_\_\_

Number of stages \_\_\_\_\_

## Certification

Quality management certified to ISO 9001

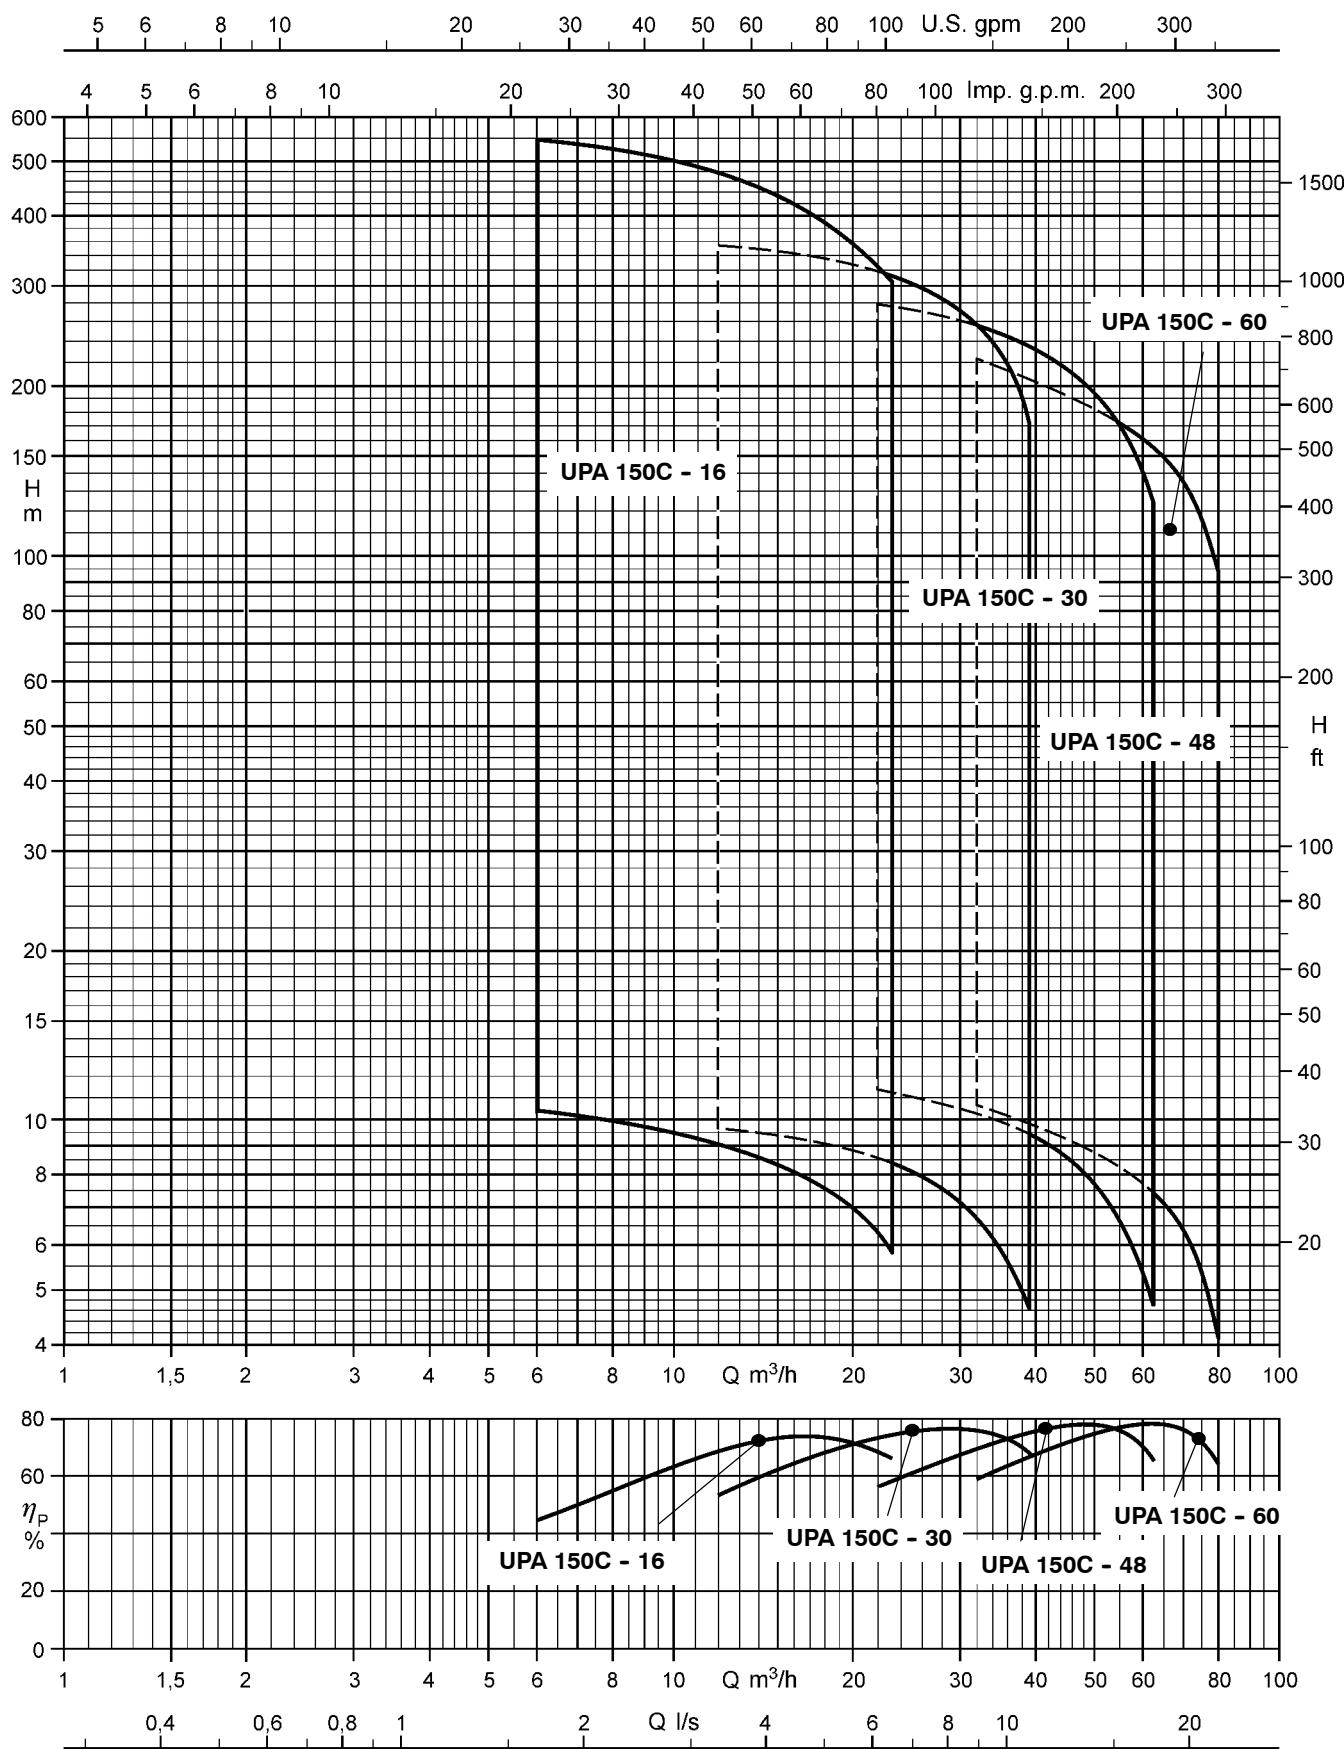

## Submersible Borehole Pumps for Well Diameters of 150 mm (6 inches)

## Product Features

- Rust-proof
- Suitable for installation in narrow deep wells
- High efficiency
- Motor designed for maximum pump output
- Low noise level
- For vertical, angled or horizontal installation
- Check valve with anti-blockage valve disc

## Selection Charts (Ranges on Offer)

 $n \sim 2900$  rpm

## UPA 150C - 16 / ..., number of stages 1 - 20

The characteristic curves shown are for preliminary selection only. Exact selection data will be provided in our quotation.

### Selection

The pressure losses  $H_V$  in the check valve are not considered in the pump characteristic curves.

Legend ...

$H_V$ : Head losses in the check valve

$\eta_p$ : Pump efficiency (not considering check valve)

NPSH: Net positive suction head required by the pump

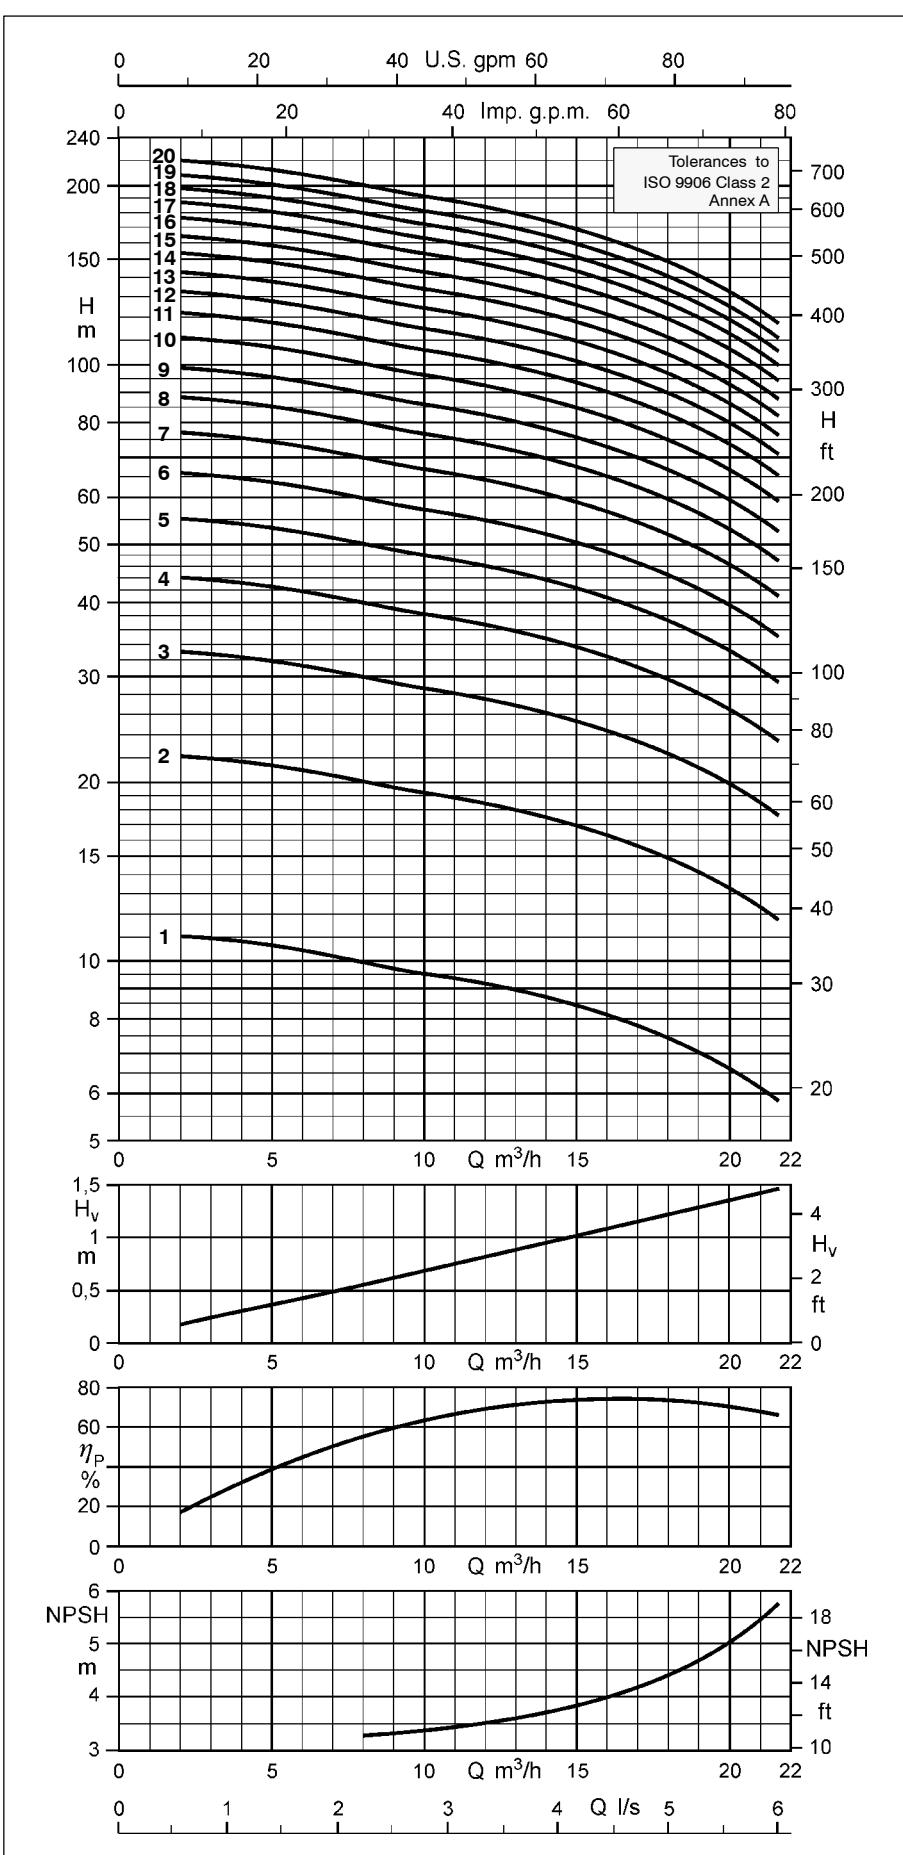

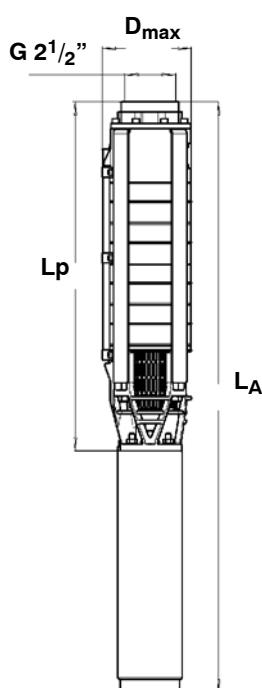

### Pump End G 2 $\frac{1}{2}$ "

The information given below is based on the model with check valve and threaded end.

The changes in the main dimensions resulting from different threaded or flanged ends are specified in the table below.

	Overall length (mm)	$D_{max}$ (mm)
G 2 $\frac{1}{2}$ "	40	see page 40
G 3"	48	
G 4"	93	
DN 50	77	165
DN 65	77	185
DN 80	77	200

Threaded end to DIN ISO 228, Part 1.  
Flanged end to DIN 2501, Part 1

on request

1) Including check valve with threaded end and standard motor leads.

2) v = vertical / h = horizontal.

## UPA 150C - 16 / ..., number of stages 21 - 52

The characteristic curves shown are for preliminary selection only. Exact selection data will be provided in our quotation.

### Selection

The pressure losses  $H_V$  in the check valve are not considered in the pump characteristic curves.

Legend ...

$H_V$ : Head losses in the check valve

$\eta_p$ : Pump efficiency (not considering check valve)

NPSH: Net positive suction head required by the pump

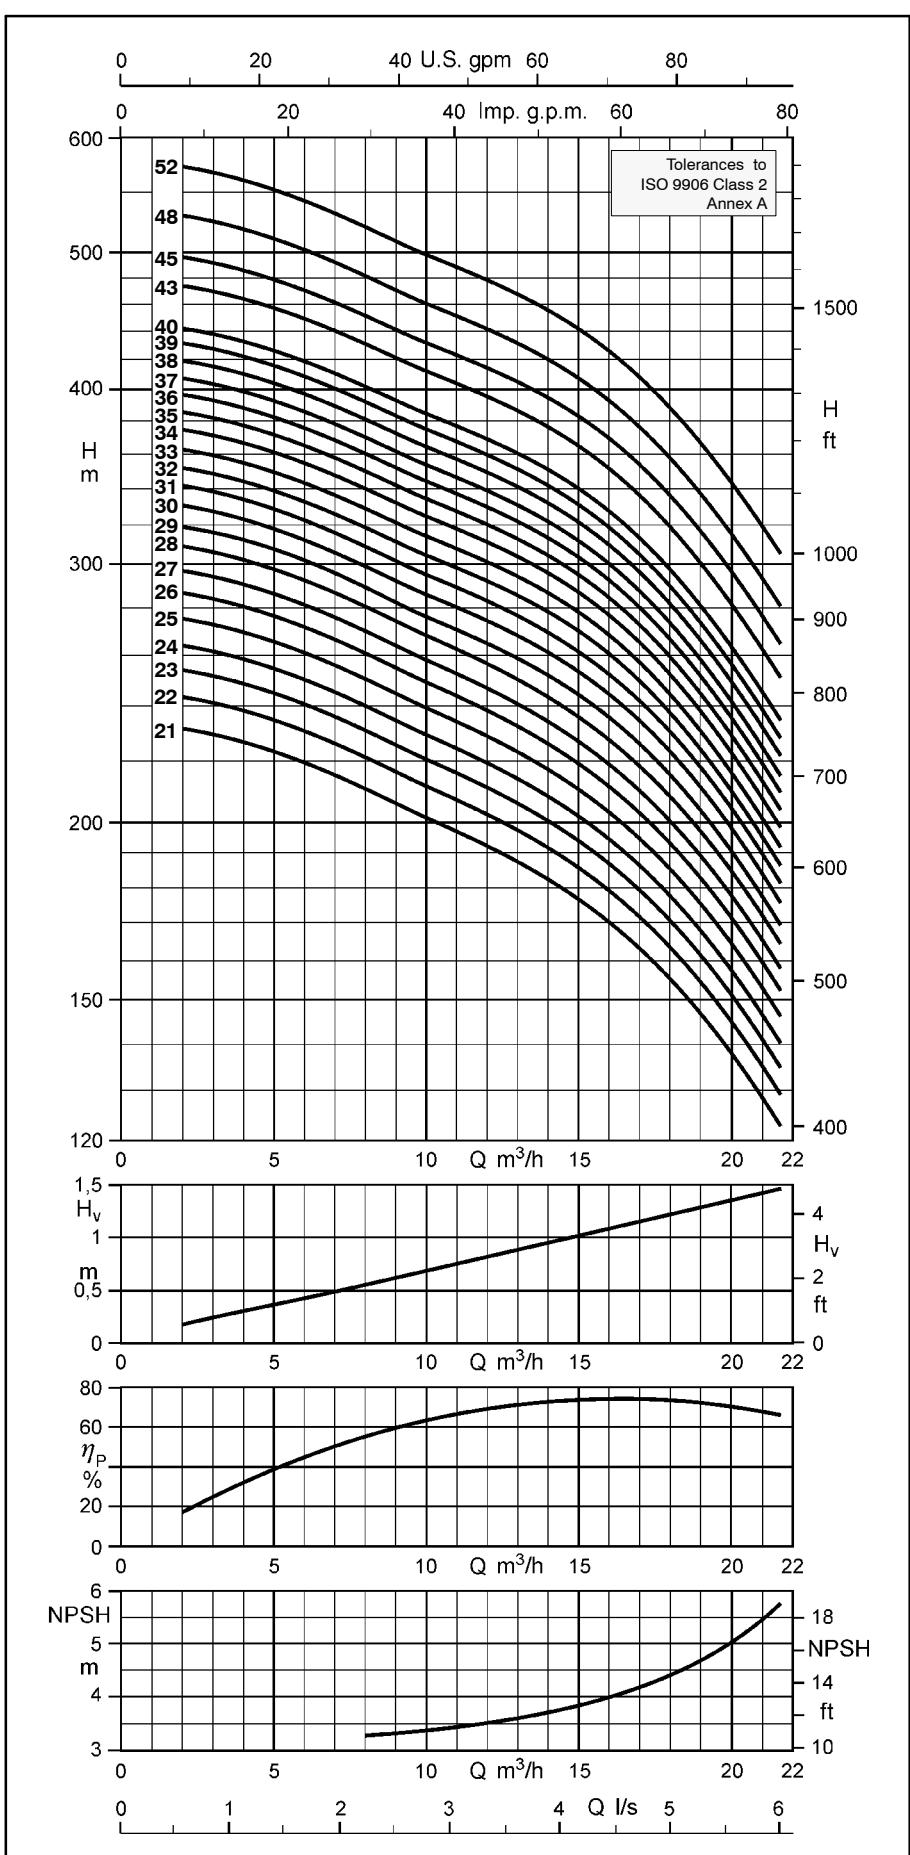

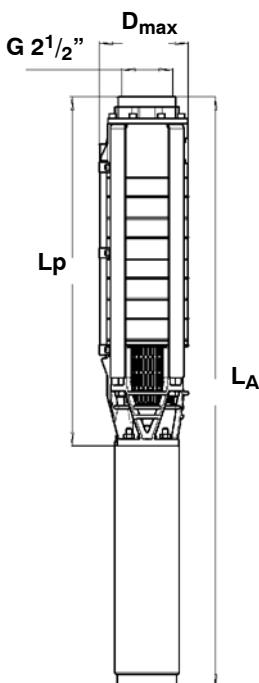

### Pump End G 2 $\frac{1}{2}$ "

The information given below is based on the model with check valve and threaded end.

The changes in the main dimensions resulting from different threaded or flanged ends are specified in the table below.

## UPA 150C - 60 / ..., number of stages 14 - 20

The characteristic curves shown are for preliminary selection only. Exact selection data will be provided in our quotation.

### Selection

The pressure losses  $H_V$  in the check valve are not considered in the pump characteristic curves.

Legend ...

$H_V$ : Head losses in the check valve

$\eta_p$ : Pump efficiency (not considering check valve)

NPSH: Net positive suction head required by the pump

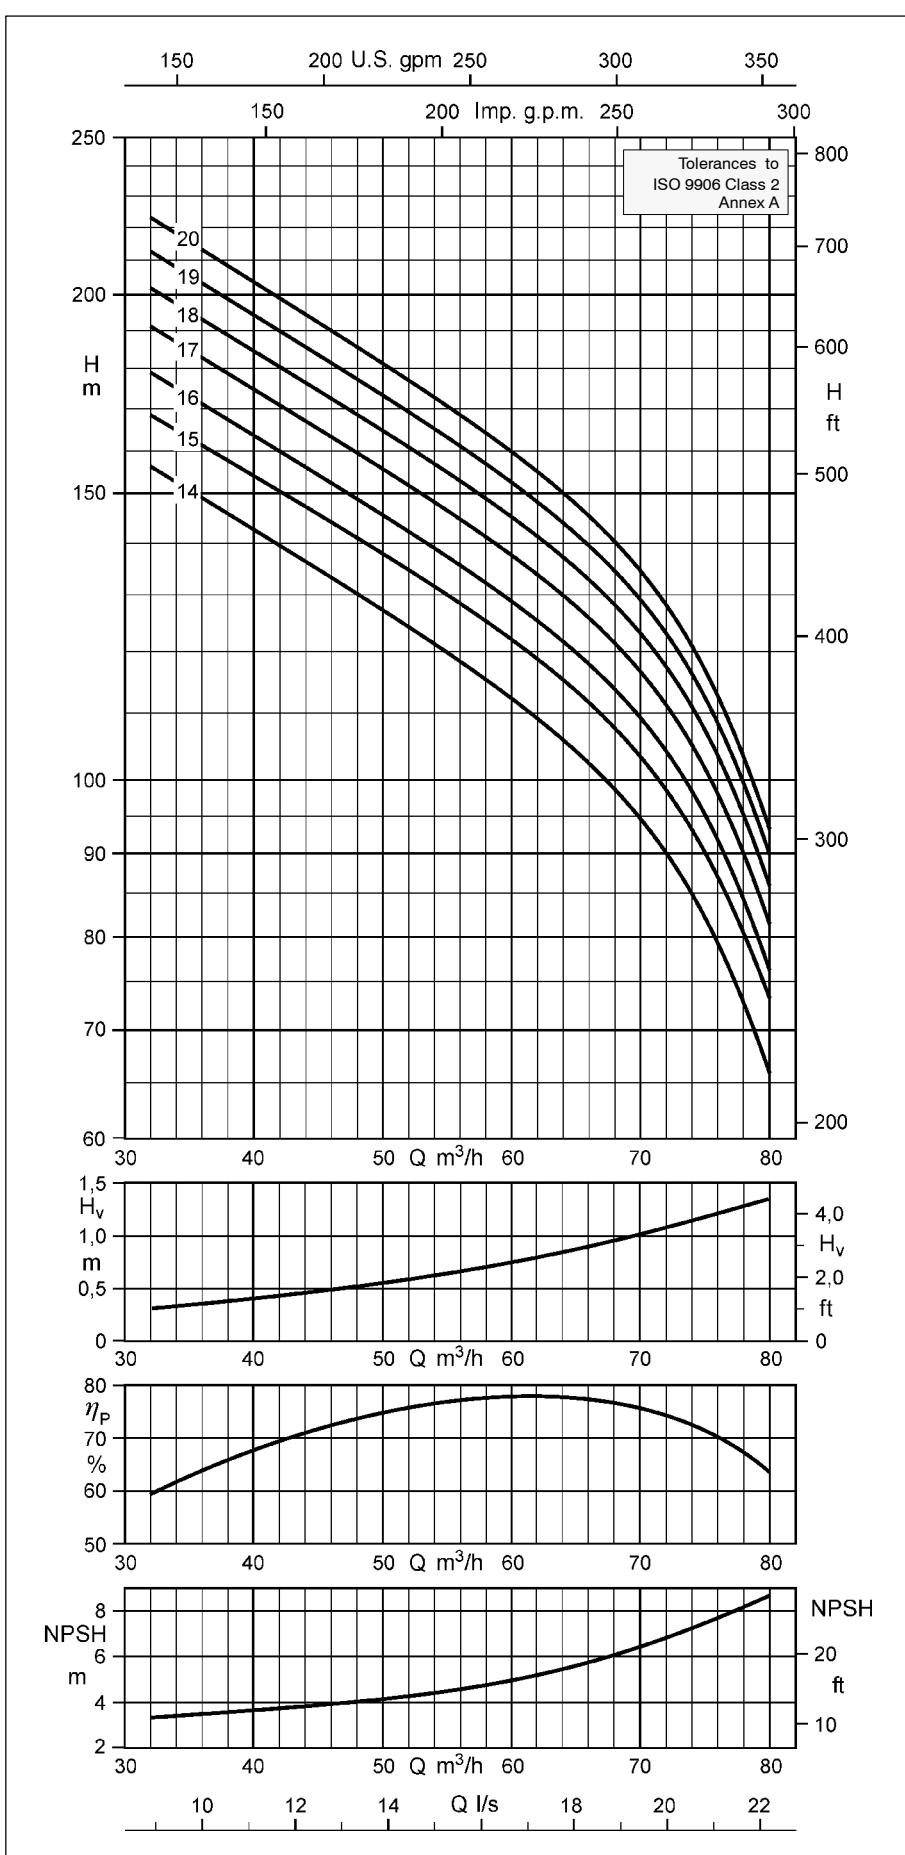

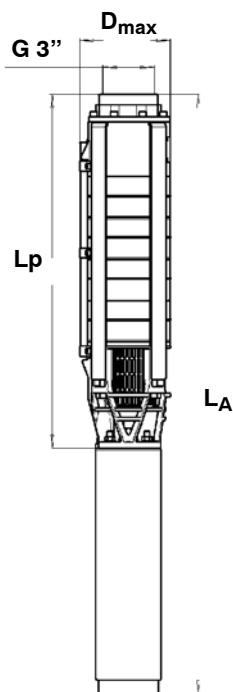

### Pump End G 3"

The information given below is based on the model with check valve and threaded end.

The changes in the main dimensions resulting from different threaded or flanged ends are specified in the table below.

	Overall length (mm)	$D_{max}$ (mm)
G 3"	48	see page 54
G 4"	93	

Threaded end to DIN ISO 228, Part 1.  
Flanged end to DIN 2501, Part 1

## Applications

Handling clean or slightly contaminated water ...

- in general water supply systems,
- in irrigation and spray irrigation systems,
- in pressure boosting systems,
- in emergency water supply systems,
- in installations for lowering and maintaining ground water levels.

Also used in ...

- mining,
- sprinkler installations,
- fountains, etc.

Permissible sand content in the fluid handled: 50 g/m<sup>3</sup>.

Also suitable for aggressive seawater if supplied in material variant C3 (duplex).

## Operating Data

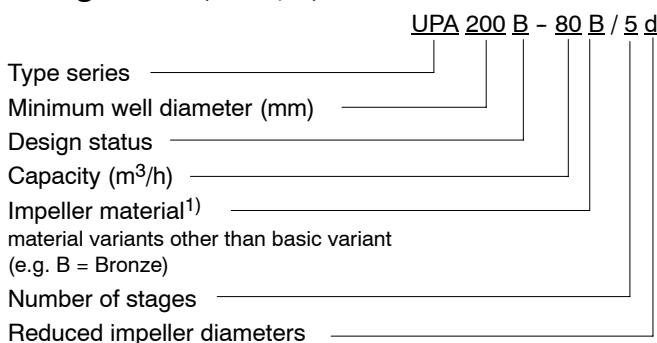

Capacity	Q up to 330 m <sup>3</sup> /h (92 l/s)
Head	H up to 460 m
Temperature of fluid handled	t up to +50 °C
Speed	n ≈ 2900 rpm

## Design

Single or multistage, single-entry centrifugal pumps in ring-section design. Mixed flow hydraulic systems with impellers that can be turned down. Stage casings connected by means of studs. Suction casing fitted between pump and motor. Suction casing equipped with strainer to protect the pump from coarse particles in the fluid.

Pumps with non-return valve or connection branch on option. Both models available with either threaded or flanged end. Particularly suitable for vertical installation in narrow deep wells.

## Designation (Example)

<sup>1)</sup> Applies to UPA 200B only.

## Certification

Quality management certified to ISO 9001

## Submersible Borehole Pumps

for Well Diameters  
of 200 mm (8 inches)  
and of 250 mm (10 inches)

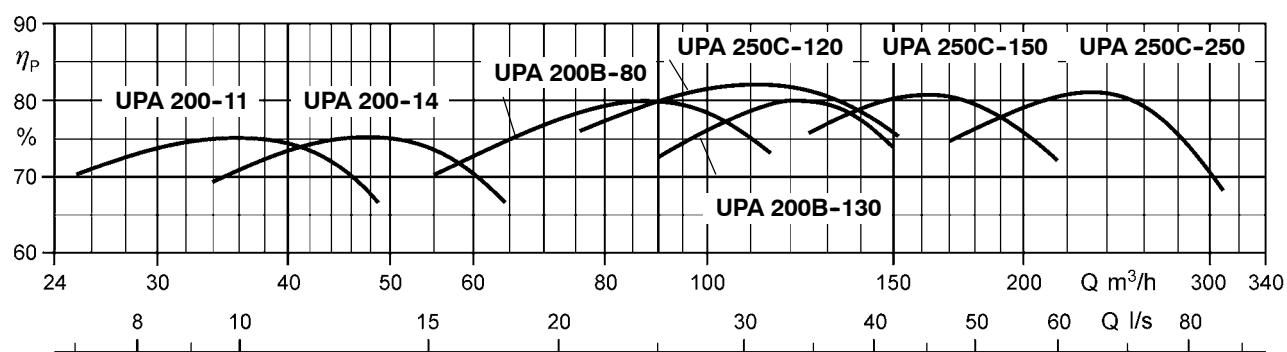

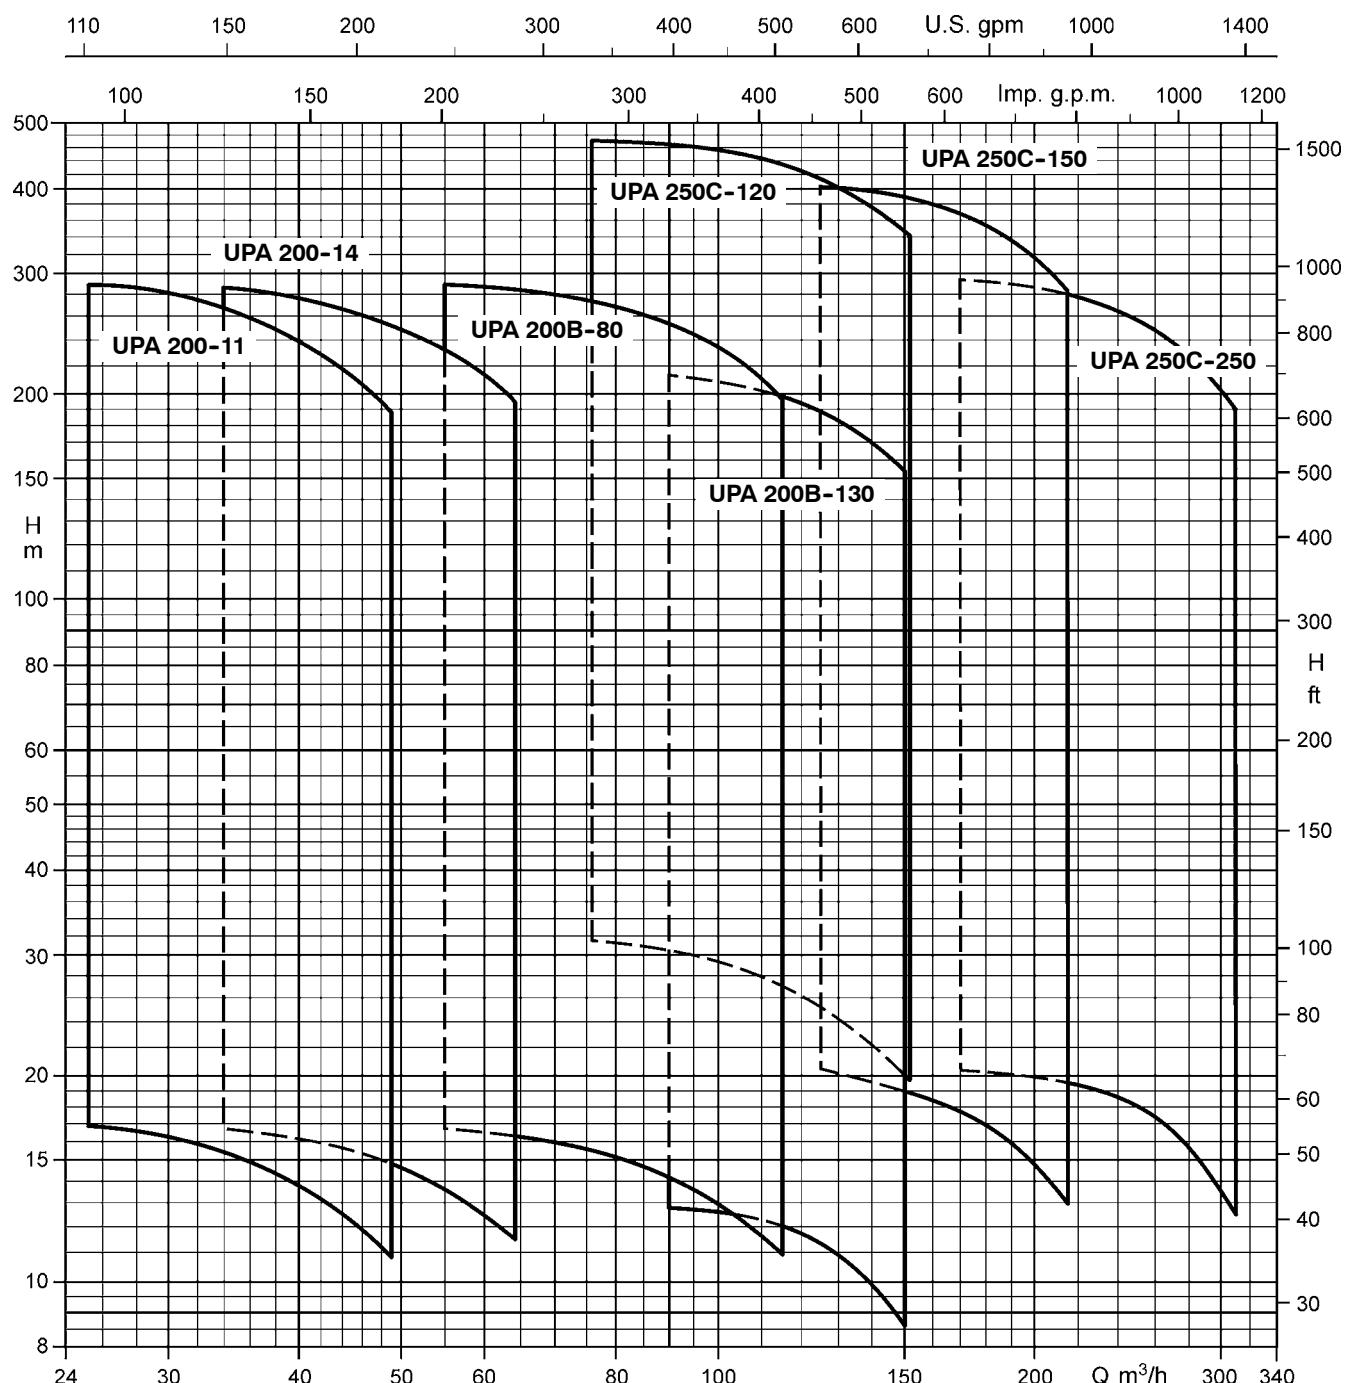

## Product Features

- Very sturdy design
- Suitable for installation in narrow deep wells
- High efficiency
- Motor designed for maximum pump output
- Low noise level
- For vertical or horizontal installation
- Check valve protected against blocking
- Pre-filled motor; no risk of contamination of the pumped water

**Selection Chart** (Ranges on Offer)

n ≈ 2900 rpm

**Note:**

The diagram shows the  $\Delta Q_A$  range on offer. The pumps can be offered for any duty point within this range. The  $\Delta Q_B$  operating ranges of the individual pump sizes are given in the characteristic curves for different stage numbers on the following pages.

**Selection charts or performance curves for UPA in material variant C3 (duplex) on request only.**

## UPA 200 - 11 / ..

The characteristic curves shown are for preliminary selection only. Exact selection data will be provided in our quotation.

### Selection

The pressure losses  $H_v$  in the check valve are not considered in the pump characteristic curves. For more details and a selection example refer to page 8.

#### Legend ...

$H_v$ : Head losses in the check valve

$\eta_p$ : Pump efficiency  
(not considering check valve)

NPSH: Net positive suction head  
required by the pump

### Pump End G 3" / DN 80

The information is based on the model "with check valve / connection branch and threaded end".

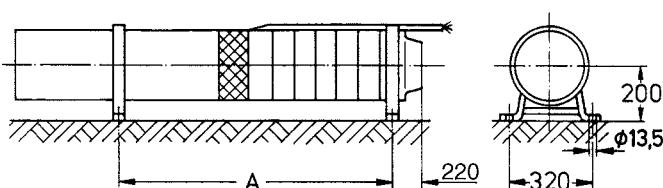

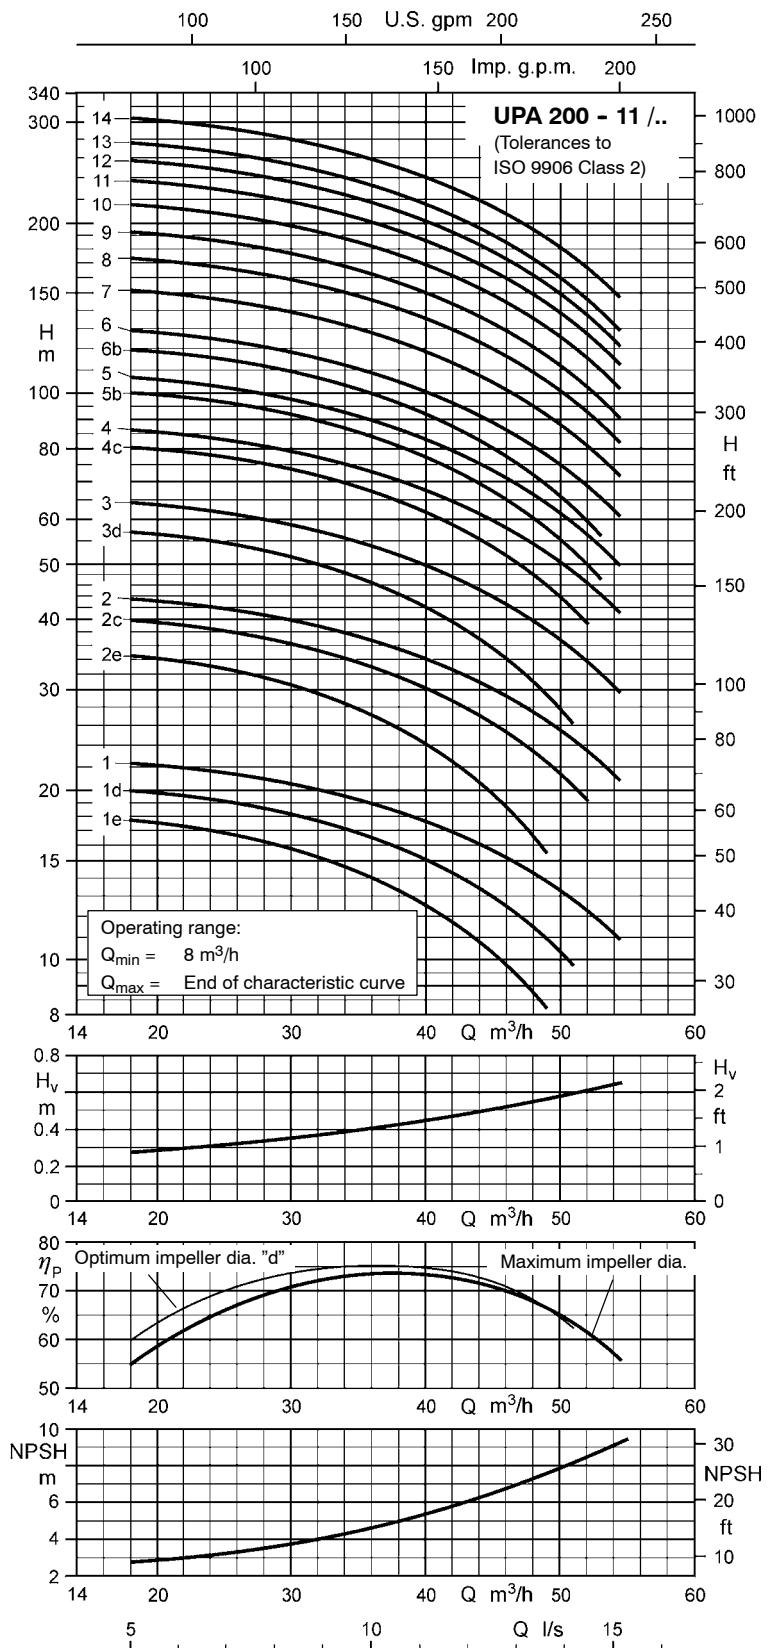

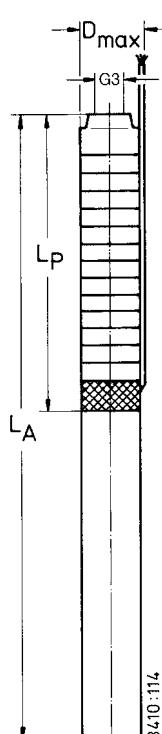

The changes in the main dimensions of the "flanged end" model are specified in the table below.

Check valve / connection branch with:

Threaded end G 3"	Flanged end DN 80	
Length mm	Length mm	Outside diameter mm
200	200 (PN 10/16) 200 (PN 25/40)	200 200

Threaded end to DIN ISO 228, Part 1

Flange mating dimensions to DIN 2501, Part 1

**UPA 200 - 14 for Well Diameters of 200 mm (8 inches) and above**

1) Including check valve with threaded end and standard motor leads.

2) v = vertical and h = horizontal.

3) Horizontal installation on request.

## **UPA 200 - 14 / ..**

The characteristic curves shown are for preliminary selection only. Exact selection data will be provided in our quotation.

### **Selection**

The pressure losses  $H_v$  in the check valve are not considered in the pump characteristic curves. For more details and a selection example refer to page 8.

#### Legend ...

$H_v$ : Head losses in the check valve.

$\eta_p$ : Pump efficiency  
(not considering check valve).

NPSH: Net positive suction head required by the pump.

## **Pump End G 3" / DN 80**

The information is based on the model "with check valve / connection branch and threaded end".

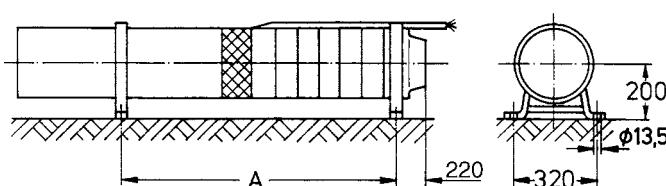

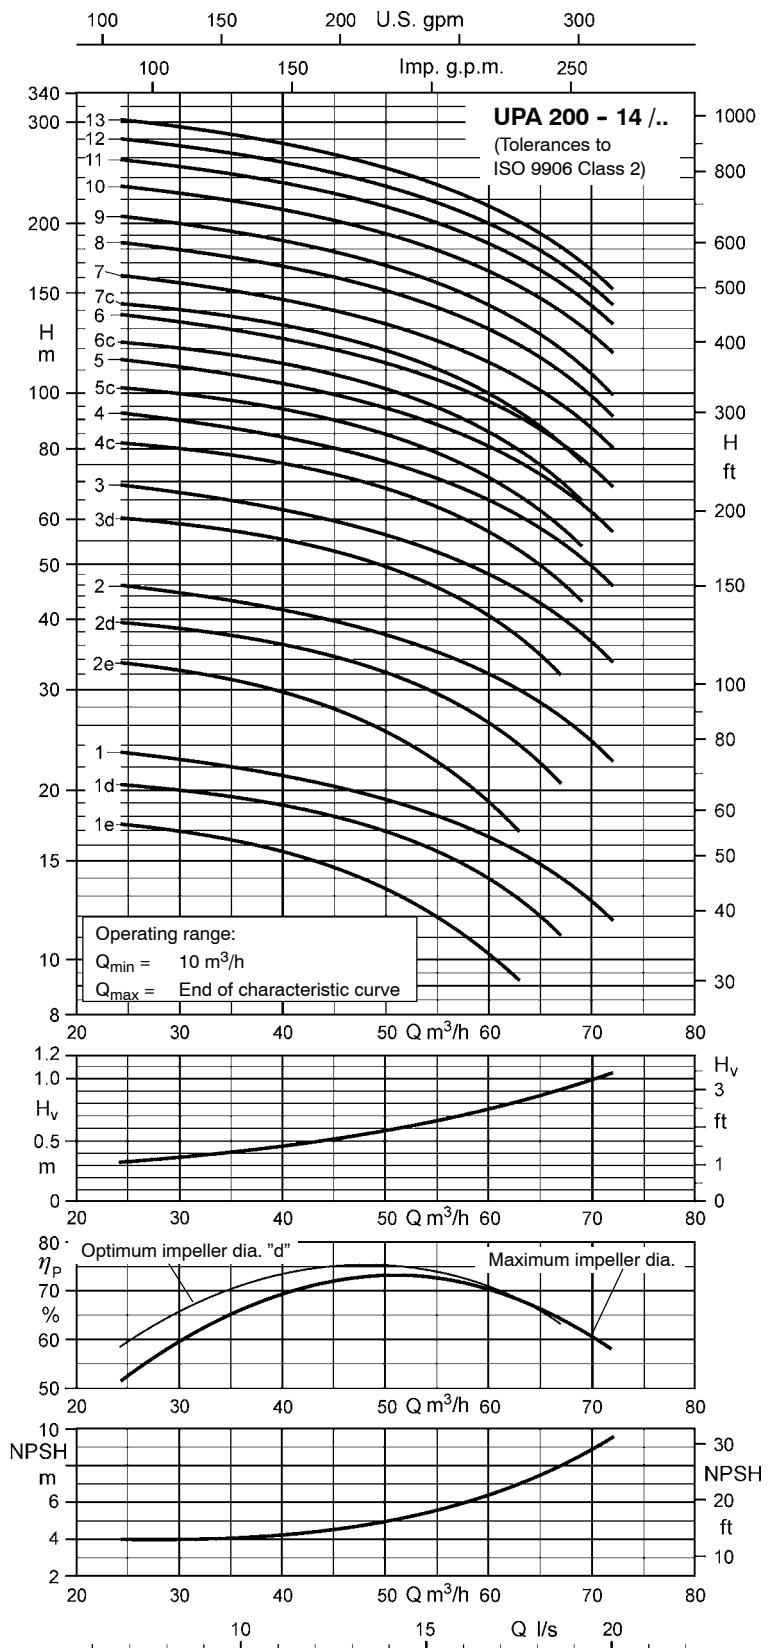

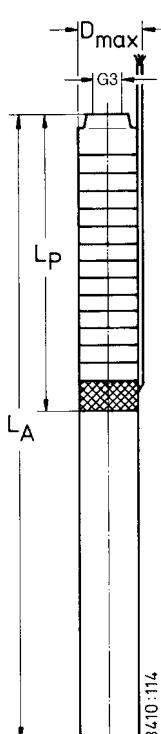

The changes in the main dimensions of the "flanged end" model are specified in the table below.

Check valve / connection branch with

Threaded end G 3"	Flanged end DN 80	
Length mm	Length mm	Outside diameter mm
200	200 (PN 10/16) 200 (PN 25/40)	200 200

Threaded end to DIN ISO 228, Part 1

Flange mating dimensions to DIN 2501, Part 1

2) v = vertical and h = horizontal.

4) Horizontal installation only with bearing pedestals of special design.

**UPA 200B - 80 / ..**

The characteristic curves shown are for preliminary selection only. Exact selection data will be provided in our quotation.

**Selection**

The characteristic curves shown apply to the standard impeller material, i.e. Noryl.

The performance data for the full impeller diameter and impeller diameter "b" for the given number of stages will only be achieved when the impellers are made of Noryl (PPO).

For the special impeller material (bronze), please select the next higher number of stages.

In this case, please refer to the characteristic curves individually prepared for the quotation.

The pressure losses  $H_V$  in the check valve are not considered in the pump characteristic curves.

For more details and a selection example refer to pages 8.

Legend ...

$H_V$ : Head losses in the check valve.

$\eta_p$ : Pump efficiency  
(not considering check valve).

NPSH: Net positive suction head  
required by the pump.

**Pump End G 5" / DN 125**

The information is based on the model "with check valve / connection branch and threaded end".

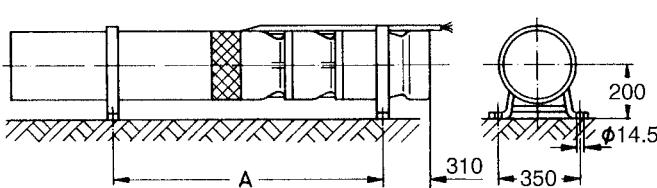

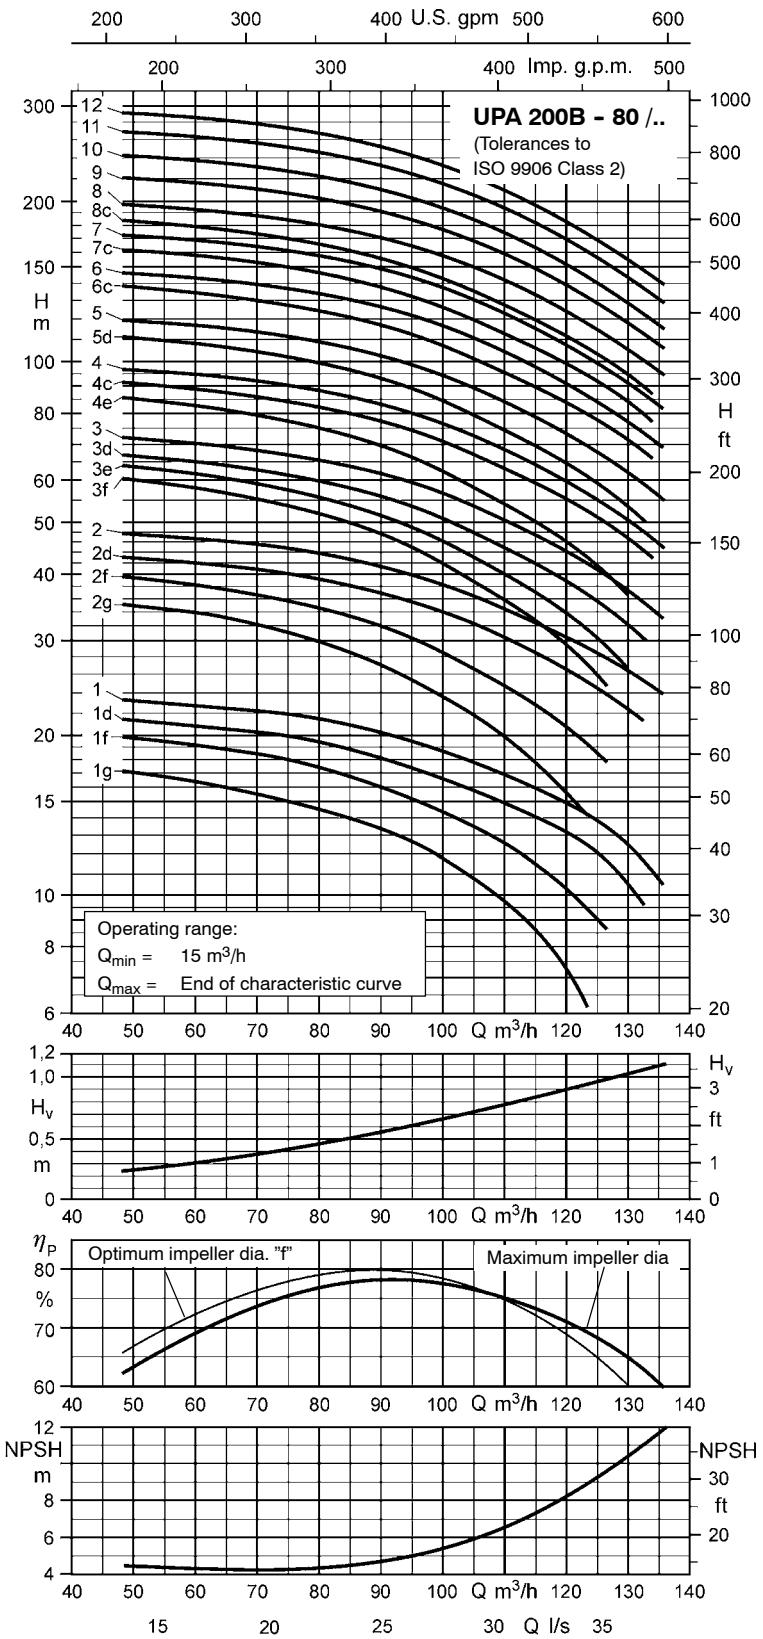

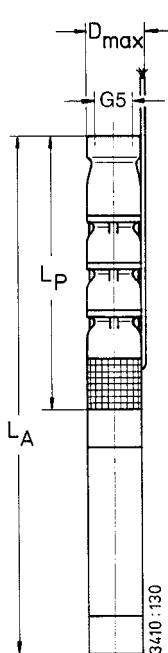

The changes in the main dimensions of the "flanged end" model are specified in the table below.

Check valve / connection branch with

Threaded end G 5"	Flanged end DN 125	
Length mm	Length mm	Outside diameter mm
200	150 (PN 10/16) 150 (PN 25/40)	250 270

Threaded end to DIN ISO 228, Part 1.

Flange mating dimensions to  
DIN 2501, Part 1

1) Including check valve with threaded end and standard motor leads.

2) v = vertical and h = horizontal.

3) Horizontal installation on request.

4) Horizontal installation only with bearing pedestals of special design.

## UPA 200B - 130 / ..

The characteristic curves shown are for preliminary selection only. Exact selection data will be provided in our quotation.

### Selection

The characteristic curves shown apply to the standard impeller material, i.e. Noryl.

The performance data for the full impeller diameter for the given number of stages will only be achieved when the impellers are made of Noryl (PPO).

For the special impeller material (bronze), please select the next higher number of stages.

In this case, please refer to the characteristic curves individually prepared for the quotation.

The pressure losses  $H_V$  in the check valve are not considered in the pump characteristic curves.

For more details and a selection example refer to page 8.

Legend ...

- $H_V$ : Head losses in the check valve
- $\eta_p$ : Pump efficiency  
(not considering check valve)
- NPSH: Net positive suction head  
required by the pump

## Pump End G 5" / DN 125

The information is based on the model "with check valve / connection branch and threaded end".

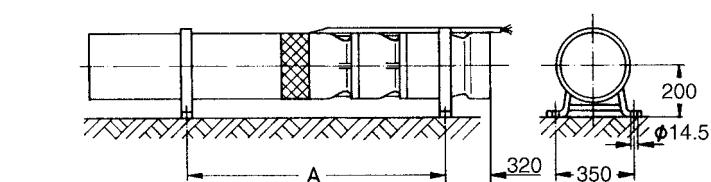

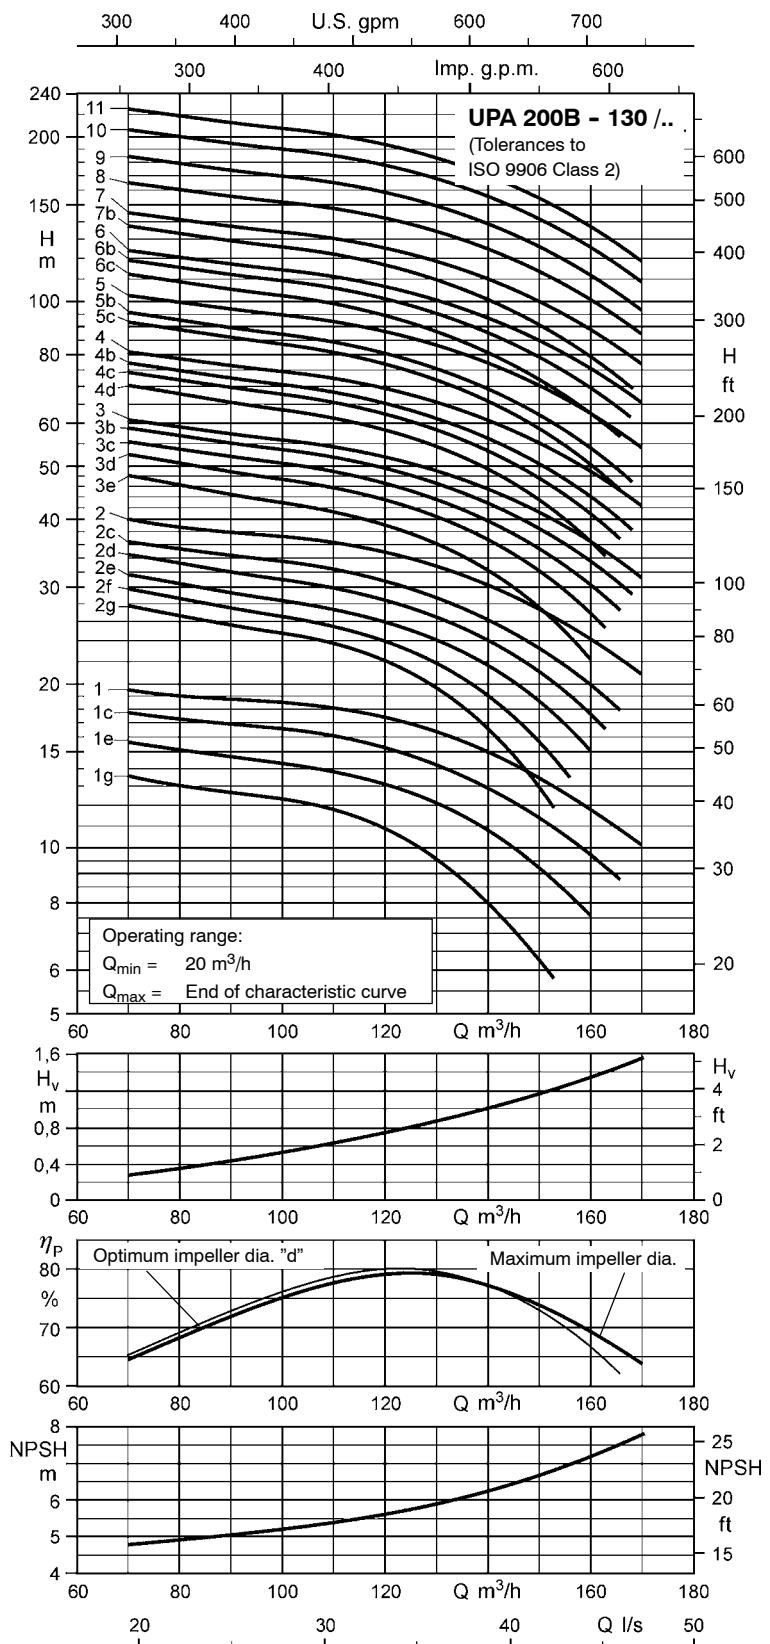

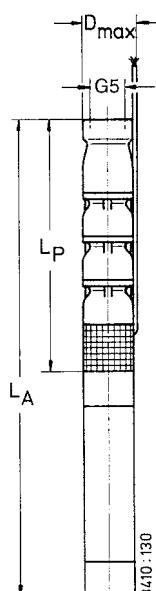

The changes in the main dimensions of the "flanged end" model are specified in the table below.

Check valve / connection branch with:

Threaded end G5"	Flanged end DN 125	
Length mm	Length mm	Outside diameter mm
200	150 (PN 10/16) 150 (PN 25/40)	250 270

Threaded end to DIN ISO 228, Part 1

Flange mating dimensions to DIN 2501, Part 1

2) v = vertical and h = horizontal.

4) Horizontal installation only with bearing pedestals of special design.

## UPA 250C - 150 / ..

The characteristic curves shown are for preliminary selection only. Exact selection data will be provided in our quotation.

### Selection

The pressure losses  $H_V$  in the check valve are not considered in the pump characteristic curves.

For more details and a selection example refer to page 8.

Legend ...

$H_V$ : Head losses in the check valve

$\eta_p$ : Pump efficiency  
(not considering check valve)

NPSH: Net positive suction head  
required by the pump

### Pump End G 6" / DN 150

The information is based on the model "with check valve / connection branch and threaded end".

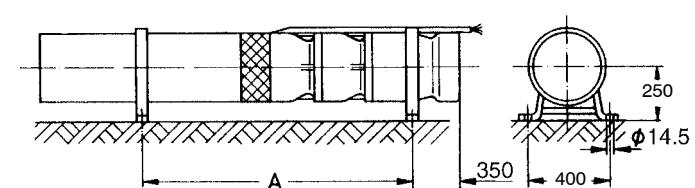

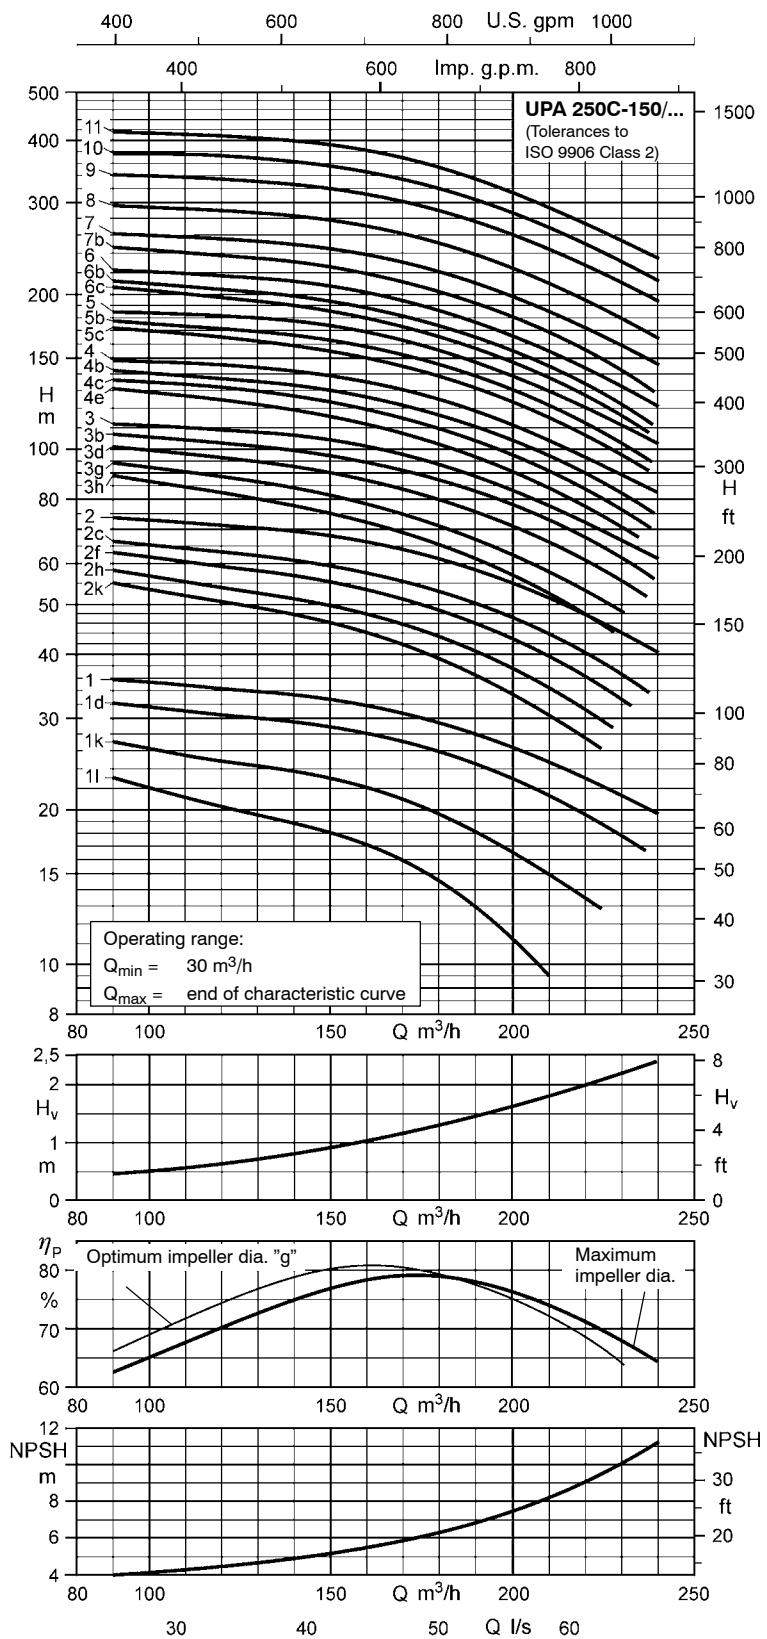

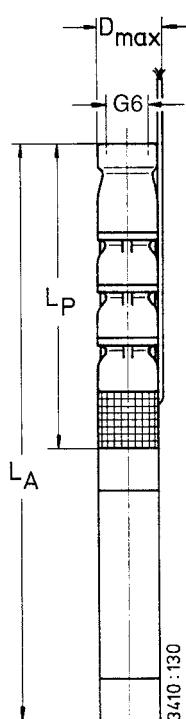

The changes in the main dimensions of the "flanged end" model are specified in the table below.

Check valve / connection branch with:

Threaded end G 6"	Flanged end DN 150	
Length mm	Length mm	Outside diameter mm
229	179 (PN 10/16) 179 (PN 25/40)	285 300

Threaded end to DIN ISO 228, Part 1.

Flange mating dimensions to DIN 2501, Part 1

**UPA 250C - 250 for Well Diameters of 250 mm (10 inches) and above**

3) Horizontal installation on request.

4) Horizontal installation only with bearing pedestals of special design.

## UPA 250C - 250 / ..

The characteristic curves shown are for preliminary selection only. Exact selection data will be provided in our quotation.

### Selection

The pressure losses  $H_v$  in the check valve are not considered in the pump characteristic curves. For more details and a selection example refer to page 8.

Legend ...

$H_v$ : Head losses in the check valve.

$\eta_p$ : Pump efficiency  
(not considering check valve)

NPSH: Net positive suction head  
required by the pump.

### Pump End G 6" / DN 150

The information is based on the model "with check valve / connection branch and threaded end".

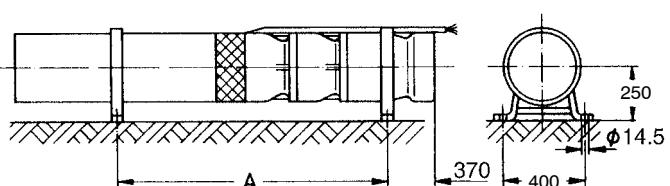

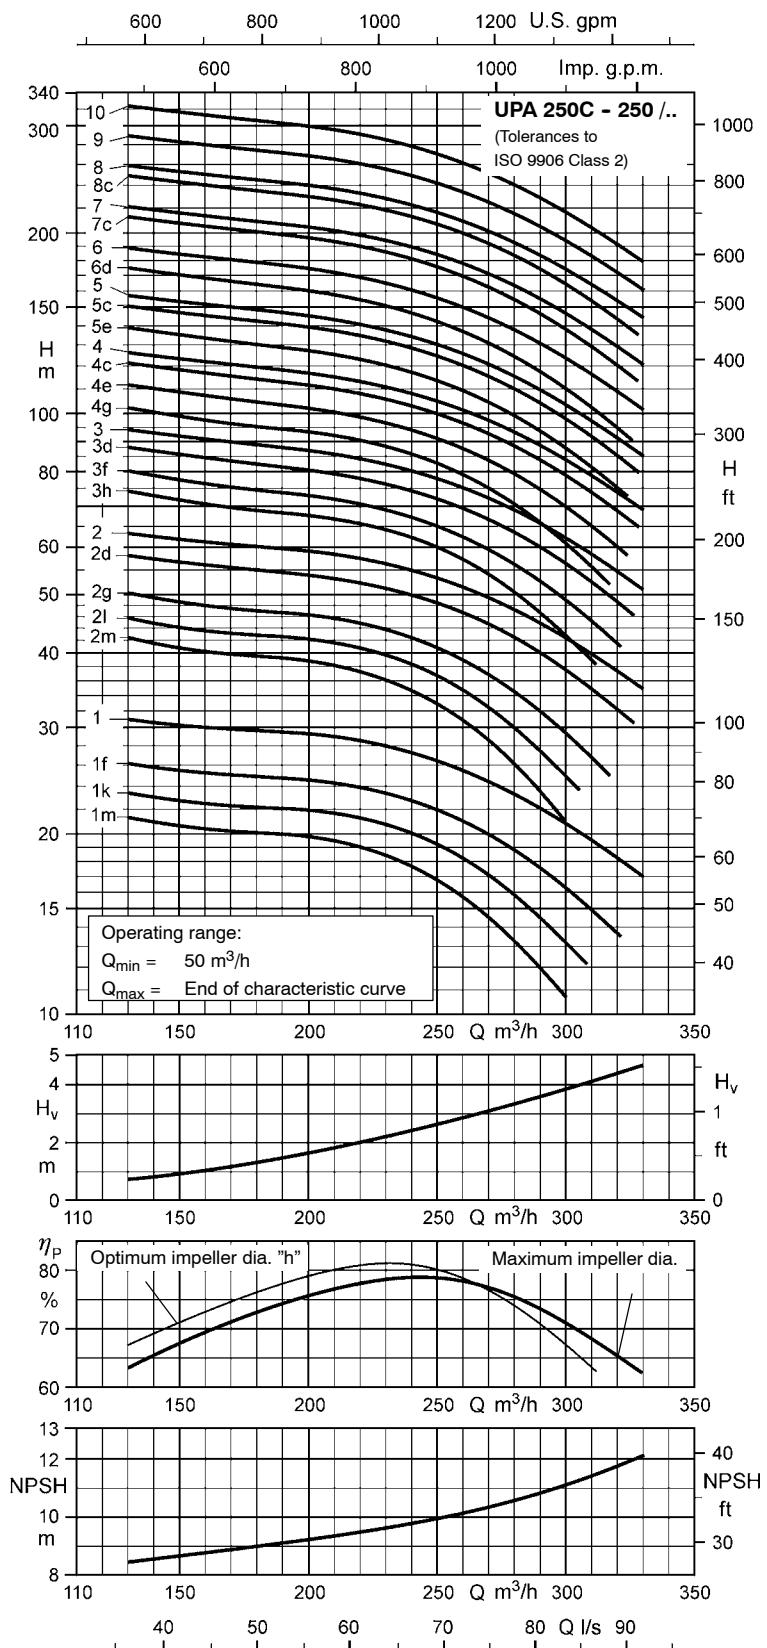

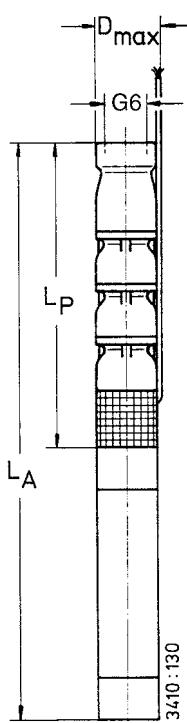

The changes in the main dimensions of the "flanged end" model are specified in the table below.

Check valve / connection branch with:

Threaded end G 6"	Flanged end DN 150	
Length mm	Length mm	Outside diameter mm
229	179 (PN 10/16) 179 (PN 25/40)	285 300

Threaded end to DIN ISO 228, Part 1

Flange mating dimensions to DIN 2501, Part 1

## Fields of Application

Handling clean or slightly contaminated water in applications such as:

- general water supply,
- irrigation and spray irrigation,
- pressure boosting,
- lowering and maintaining ground water levels as well as
- drainage.

Also used in mining, sprinkler installations, fountains etc.

Permissible sand content in the fluid handled: 50 g/m<sup>3</sup>.

Also suitable for aggressive seawater if supplied in material variant C3 (duplex).

## Operating Data

Capacity	Q up to 840 m <sup>3</sup> /h (234 l/s)
Head	H up to 480 m
Temperature of fluid handled	t up to +50 °C
Speed	n ≈ 2900 rpm

## Design

Single or multistage, single-entry centrifugal pump in ring-section design. For vertical and horizontal installation. Mixed flow hydraulic systems with impellers that can be turned down. Stage casings are connected by means of stud bolts.

Suction casing fitted between pump and motor. Suction casing equipped with strainer to protect the pump from coarse particles in the fluid.

Pumps with check valve or connection branch on option. Both models with threaded or flanged end.

Particularly suitable for vertical installation in narrow deep wells.

## Designation (Example)

Type series UPA 300 - 94 / 5 b  
Minimum well diameter (mm) \_\_\_\_\_  
Capacity Q<sub>opt</sub> (l/s) \_\_\_\_\_  
Number of stages \_\_\_\_\_  
Reduced impeller diameter(s) \_\_\_\_\_

## Submersible Borehole Pumps

for well diameters  
of 300 mm (12 inches) and above  
and of 350 mm (14 inches) and above

### Available automation products:

- Hyamaster
  - hyatronic
  - switch gear
- (for UPA 350)

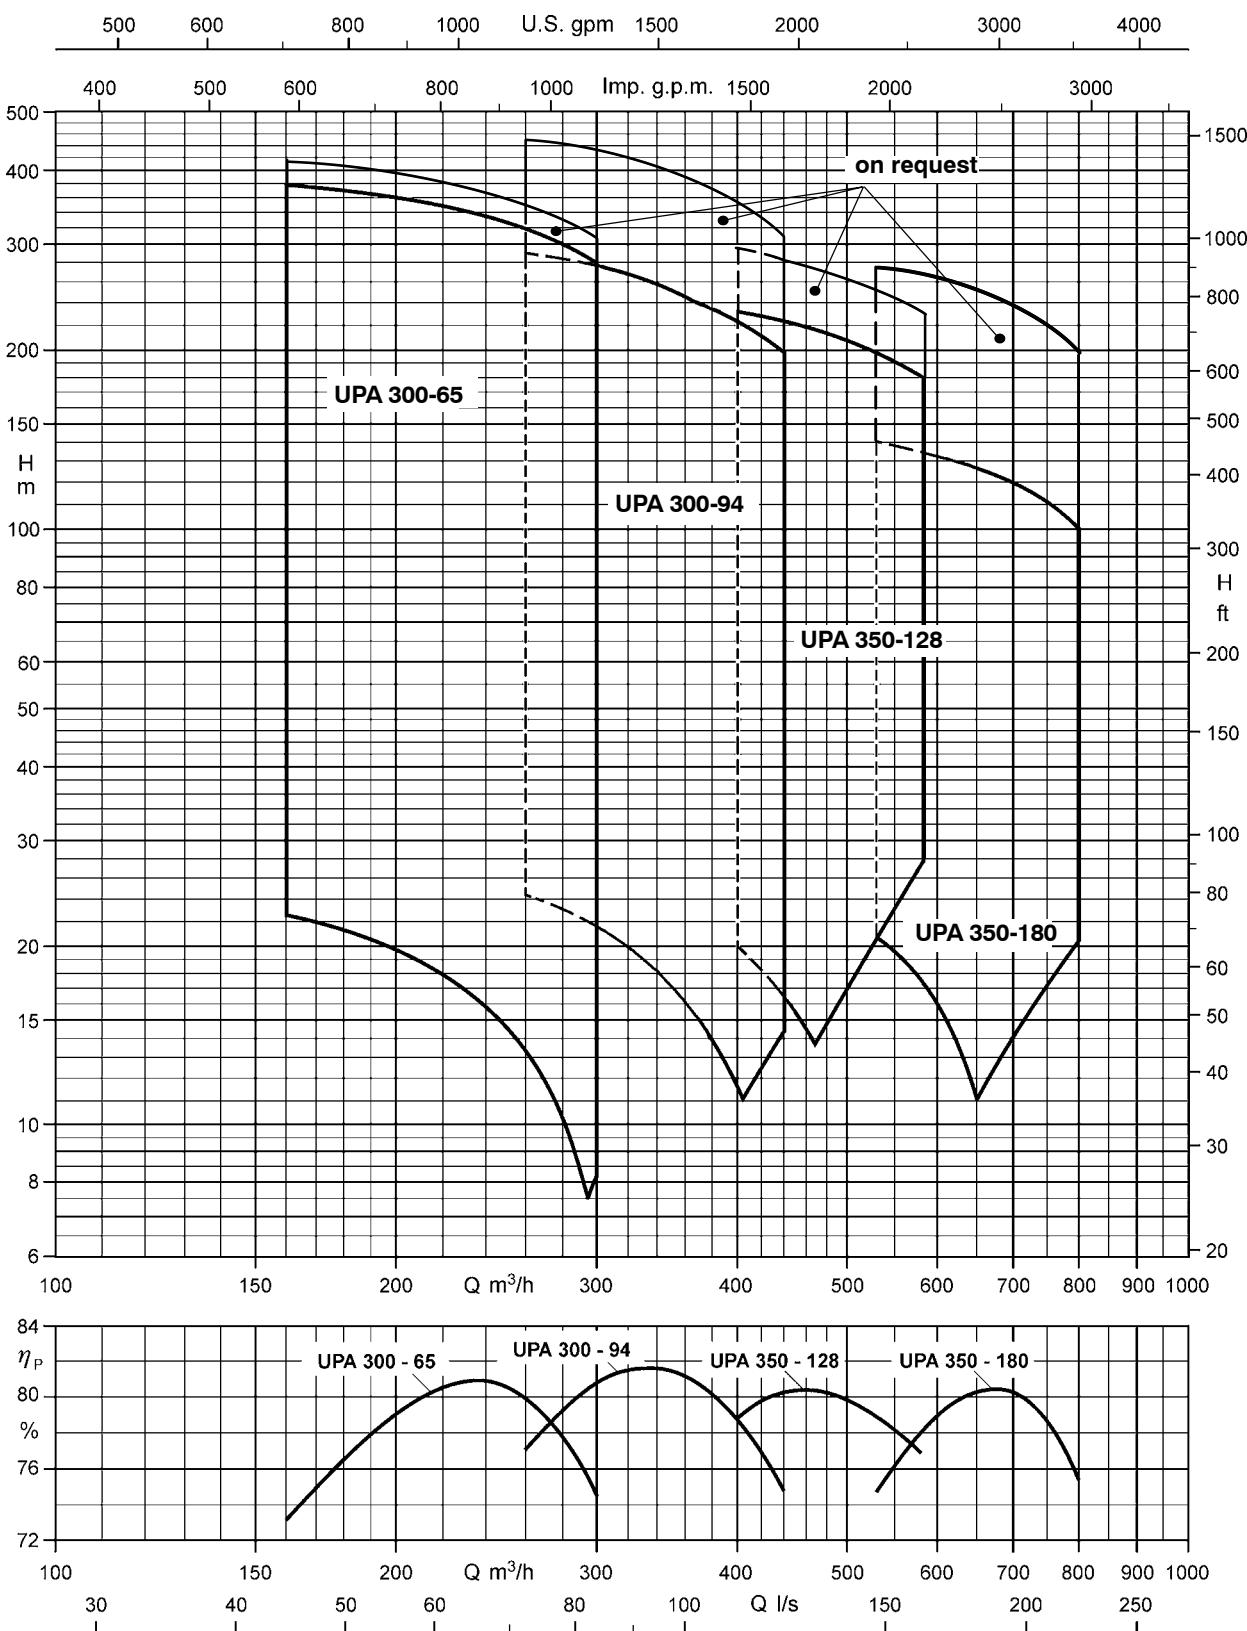

## Product Features

- Very sturdy design
- Suitable for installation in narrow deep wells
- High efficiency
- Motor designed for maximum pump output
- Low noise level
- For vertical or horizontal installation
- Check valve protected against blocking
- Pre-filled motor; no risk of contamination of the pumped water

## Certification

Quality management certified to ISO 9001

## Selection Charts (Ranges on Offer)

 $n \approx 2900$  rpm

**Note:** The diagram shows the  $\Delta Q_A$  range on offer. The pumps can be offered for any duty point within this range. The  $\Delta Q_B$  operating ranges of the individual pump sizes are given in the characteristic curves for different stage numbers on the following pages.  
**Selection charts or performance curves for UPA in material variant C3 (duplex) in request only.**

**UPA 300 - 65 / ..**

The characteristic curves shown are for preliminary selection only. Exact selection data will be provided in our quotation.

**Selection**

The pressure losses  $H_v$  in the check valve are not considered in the pump characteristic curves. For more details and a selection example refer to page 8.

**Legend ...**

$H_v$ : Head losses in the check valve

$\eta_p$ : Pump efficiency  
(not considering check valve)

NPSH: Net positive suction head  
required by the pump

**Pump End G 6" / DN 150**

The information is based on the model "with check valve and threaded end".

The changes in the main dimensions of the "flanged end" model or the model "with connection branch" are specified in the table below.

**a) Check valve with:**

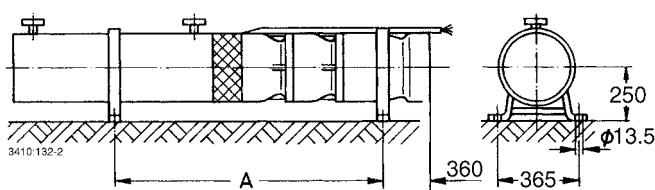

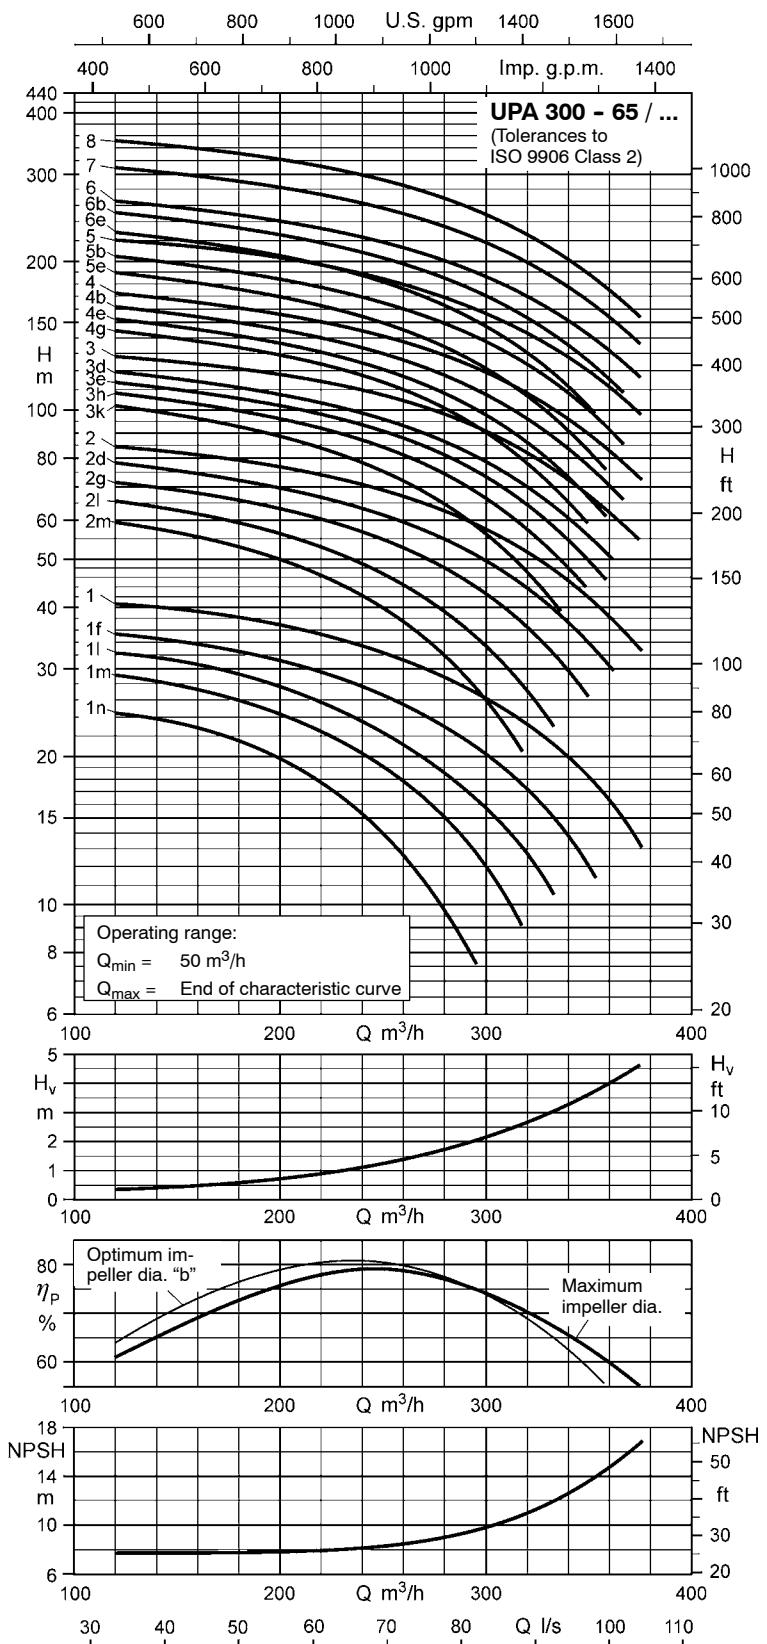

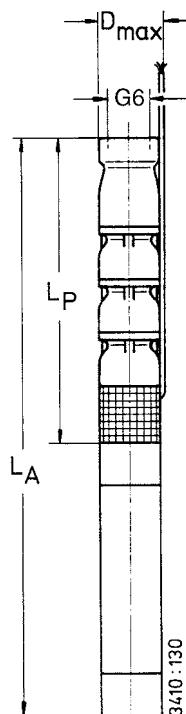

Threaded end G 6"	Flanged end DN 150	
Length mm	Length mm	Outside dia. mm
255	220 (PN 10/16) 228 (PN 25/40)	285 300

**b) Connection branch with:**

Threaded end G 6"	Flanged end DN 150	
Length mm	Length mm	Outside dia. mm
150	140 (PN 10/16) 148 (PN 25/40)	285 300

Threaded end to DIN ISO 228, Part 1.

Flange mating dimensions to DIN 2501, Part 1

Including check valve with threaded end and standard motor leads.  
v = vertical / h = horizontal.

3) Horizontal installation on request.

4) Horizontal installation only with bearing pedestals of special design.

## UPA 300 - 94 / ..

The characteristic curves shown are for preliminary selection only. Exact selection data will be provided in our quotation.

### Selection

The pressure losses  $H_v$  in the check valve are not considered in the pump characteristic curves. For more details and a selection example refer to page 8.

#### Legend ...

$H_v$ : Head losses in the check valve

$\eta_p$ : Pump efficiency  
(not considering check valve)

NPSH: Net positive suction head required by the pump

### Pump End G 8" / DN 200

The information is based on the model "with check valve and threaded end".

The changes in the main dimensions of the "flanged end" model or the model "with connection branch" are specified in the table below.

#### a) Check valve with:

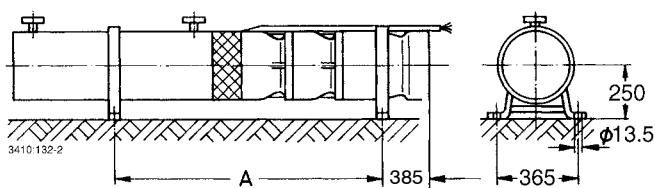

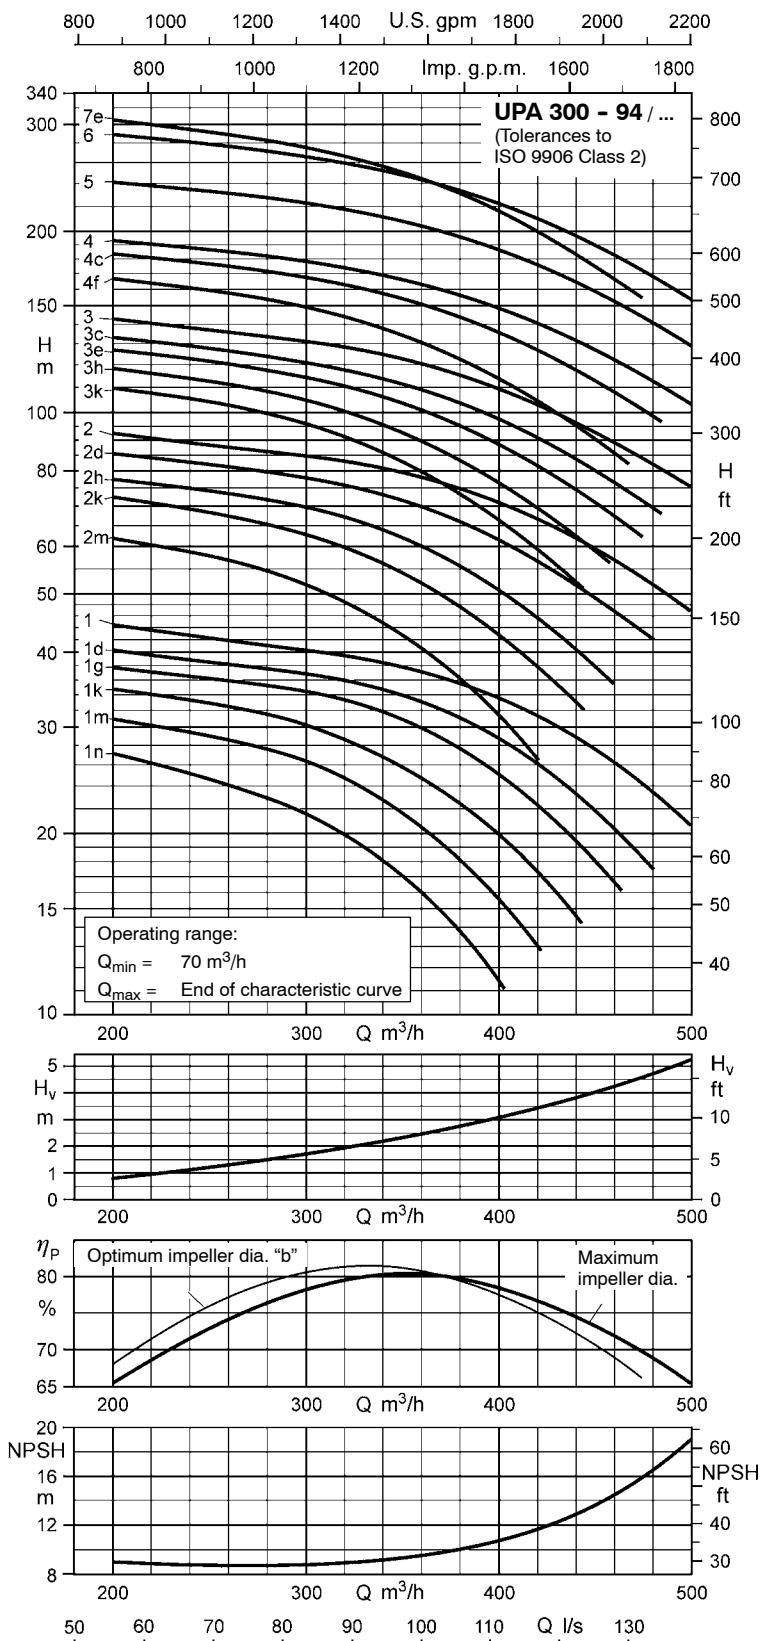

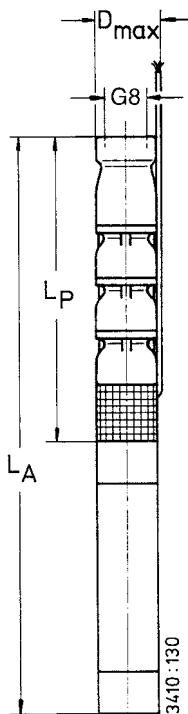

Threaded end G 8"	Flanged end DN 200	
Length mm	Length mm	Outside dia. mm
290	240 (PN 10)	340
	240 (PN 16)	340
	244 (PN 25)	360

#### b) Connection branch with:

Threaded end G 8"	Flanged end DN 200	
Length mm	Length mm	Outside dia. mm
200	134 (PN 10)	340
	134 (PN 16)	340
	138 (PN 25)	360

Threaded end to DIN ISO 228, Part 1.

Flange mating dimensions to DIN 2501, Part 1

1) Including check valve with threaded end and standard motor leads.

2) v = vertical / h = horizontal.

3) Horizontal installation on request.

4) Horizontal installation only with bearing pedestals of special design.

## UPA 300 - 128 / ..

The characteristic curves shown are for preliminary selection only. Exact selection data will be provided in our quotation.

### Selection

The pressure losses  $H_v$  in the check valve are not considered in the pump characteristic curves. For more details and a selection example refer to page 8.

Legend ...

$H_v$ : Head losses in the check valve

$\eta_p$ : Pump efficiency  
(not considering check valve)

NPSH: Net positive suction head  
required by the pump

### Pump End G 8" / DN 200<sup>1)</sup>

The information is based on the model "with check valve and threaded end".

The changes in the main dimensions of the "flanged end" model or the model "with connection branch" are specified in the table below.

a) Check valve with:

Threaded end G 8"	Flanged end DN 200	
Length mm	Length mm	Outside dia. mm
328	278 (PN 10) 278 (PN 16)	340

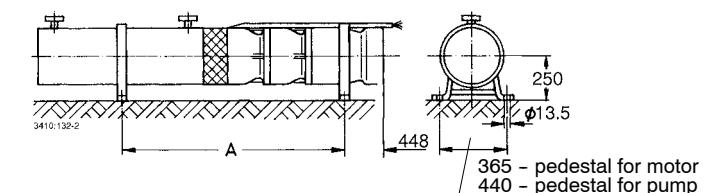

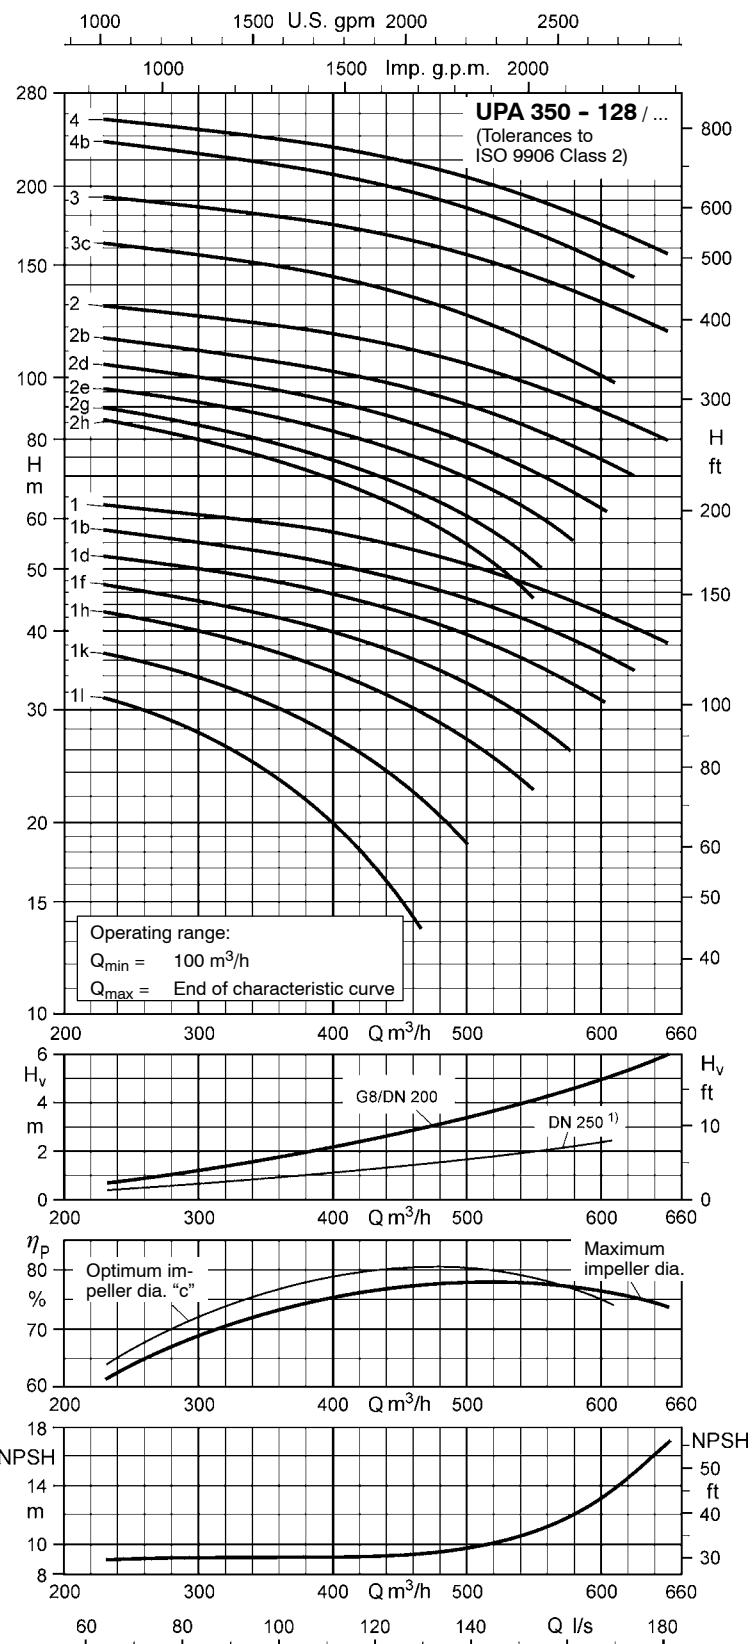

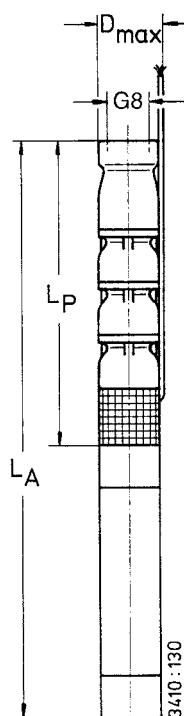

b) Connection branch with:

Threaded end G 8"	Flanged end DN 200	
Length mm	Length mm	Outside dia. mm
169	123 (PN 10) 123 (PN 16)	340

Threaded end to DIN ISO 228, Part 1

Flange mating dimensions to DIN 2501, Part 1

1) DN 250 check valve (with flanged end only)  
on request. For relevant head losses see  
 $H_v$  curve plotted over Q.

1) Including check valve with threaded end and standard motor leads.

2) v = vertical / h = horizontal.

3) Horizontal installation on request.

4) Horizontal installation only with bearing pedestals of special design.

**UPA 350 - 180 /..**

The characteristic curves shown are for preliminary selection only. Exact selection data will be provided in our quotation.

Larger discharge heads (units with UMA 300D motors) on request.

**Selection**

The pressure losses  $H_V$  in the check valve are not considered in the pump characteristic curves. For more details and a selection example refer to page 8.

**Legend ...**

$H_V$ : Head losses in the check valve

$\eta_p$ : Pump efficiency  
(not considering check valve)

NPSH: Net positive suction head  
required by the pump

**Pump End G 8" / DN 200<sup>1)</sup>**

The information is based on the model "with check valve and threaded end".

The changes in the main dimensions of the "flanged end" model or the model "with connection branch" are specified in the table below.

**a) Check valve with:**

Threaded end G 8"	Flanged end DN 200	
Length mm	Length mm	Outside dia. mm
328	278 (PN 10) 278 (PN 16)	340

**b) Connection branch with**

Threaded end G 8"	Flanged end DN 200	
Length mm	Length mm	Outside dia. mm
169	123 (PN 10) 123 (PN 16)	340

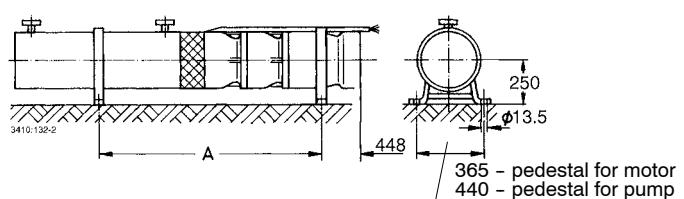

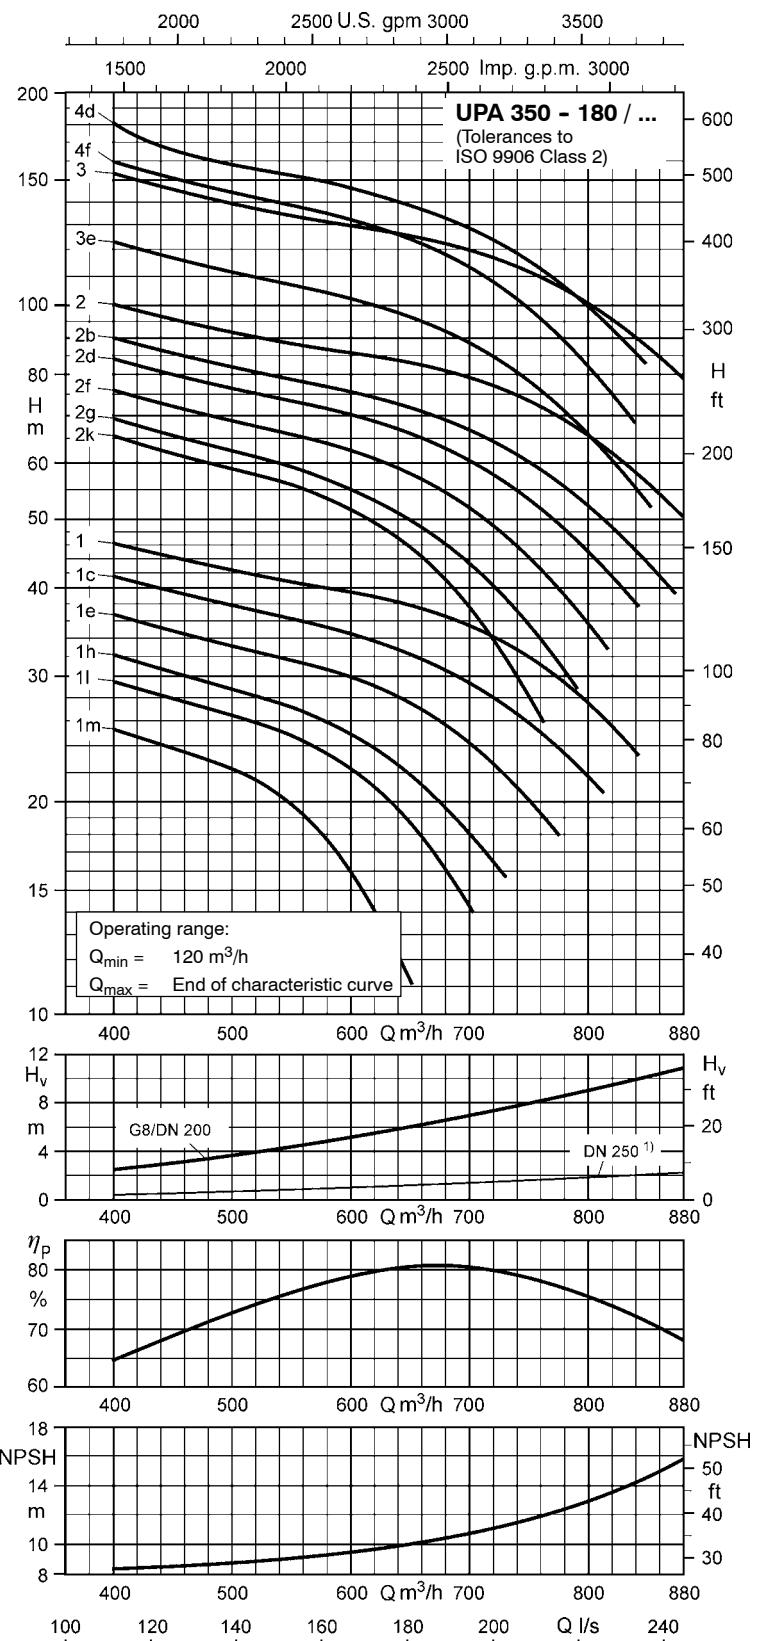

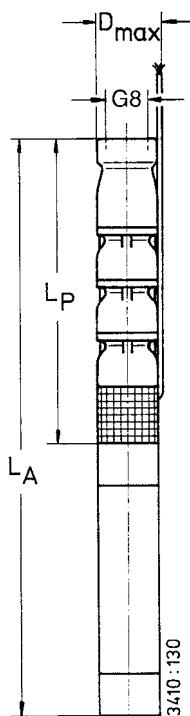

Threaded end to DIN ISO 228, Part 1.

Flange mating dimensions to DIN 2501, Part 1

1) DN 250 check valve (with flanged end only)

on request. For relevant head losses see

$H_V$  curve plotted over Q.

## Applications

Handling clean and raw water in applications such as:

- general water extraction / supply,
- irrigation and spray irrigation,
- lowering and maintaining ground water levels in open-cast mines,
- dewatering and gallery drainage in underground mines.

Use in pressure-boosting as well as for offshore and cavern applications, etc.

Permissible sand content in the fluid handled: 50 g/m<sup>3</sup>.

## Operating Data

Capacity	Q up to 2200 m <sup>3</sup> /h (610 l/s)
Head	H up to 240 m
Temperature of fluid handled	t up to + 50 °C
Speed	n ≈ 1450 rpm

## Design

Single- or multi-stage, single-entry centrifugal pumps in ring-section design. For vertical and horizontal installation. Mixed flow hydraulic systems, also available with reduced impeller diameters. Stage casings connected by means of studs.

Suction casing between pump and motor equipped with strainer to protect the pump from coarse particles in the fluid.

Pumps with check valve or connection branch on option. Both models with flanged end.

Particularly suitable for installation in narrow deep wells.

## Designation (Example)

..... B R Z S 535 / 5 a  
Type series \_\_\_\_\_ | \_\_\_\_\_ | \_\_\_\_\_ | \_\_\_\_\_ |  
Min. well diameter in mm <sup>1)</sup> \_\_\_\_\_ |  
Suction impeller \_\_\_\_\_ |  
Code for hydraulic system \_\_\_\_\_ |  
Number of stages \_\_\_\_\_ |  
Reduced impellers diameters \_\_\_\_\_ |

<sup>1)</sup> X = 400 mm (16 inches), Y = 450 mm (18 inches),  
Z = 500 mm (20 inches), E = 600 mm (24 inches),  
F = 650 mm (26 inches)

## Certification

Quality management certified to ISO 9001

## Submersible Borehole Pumps

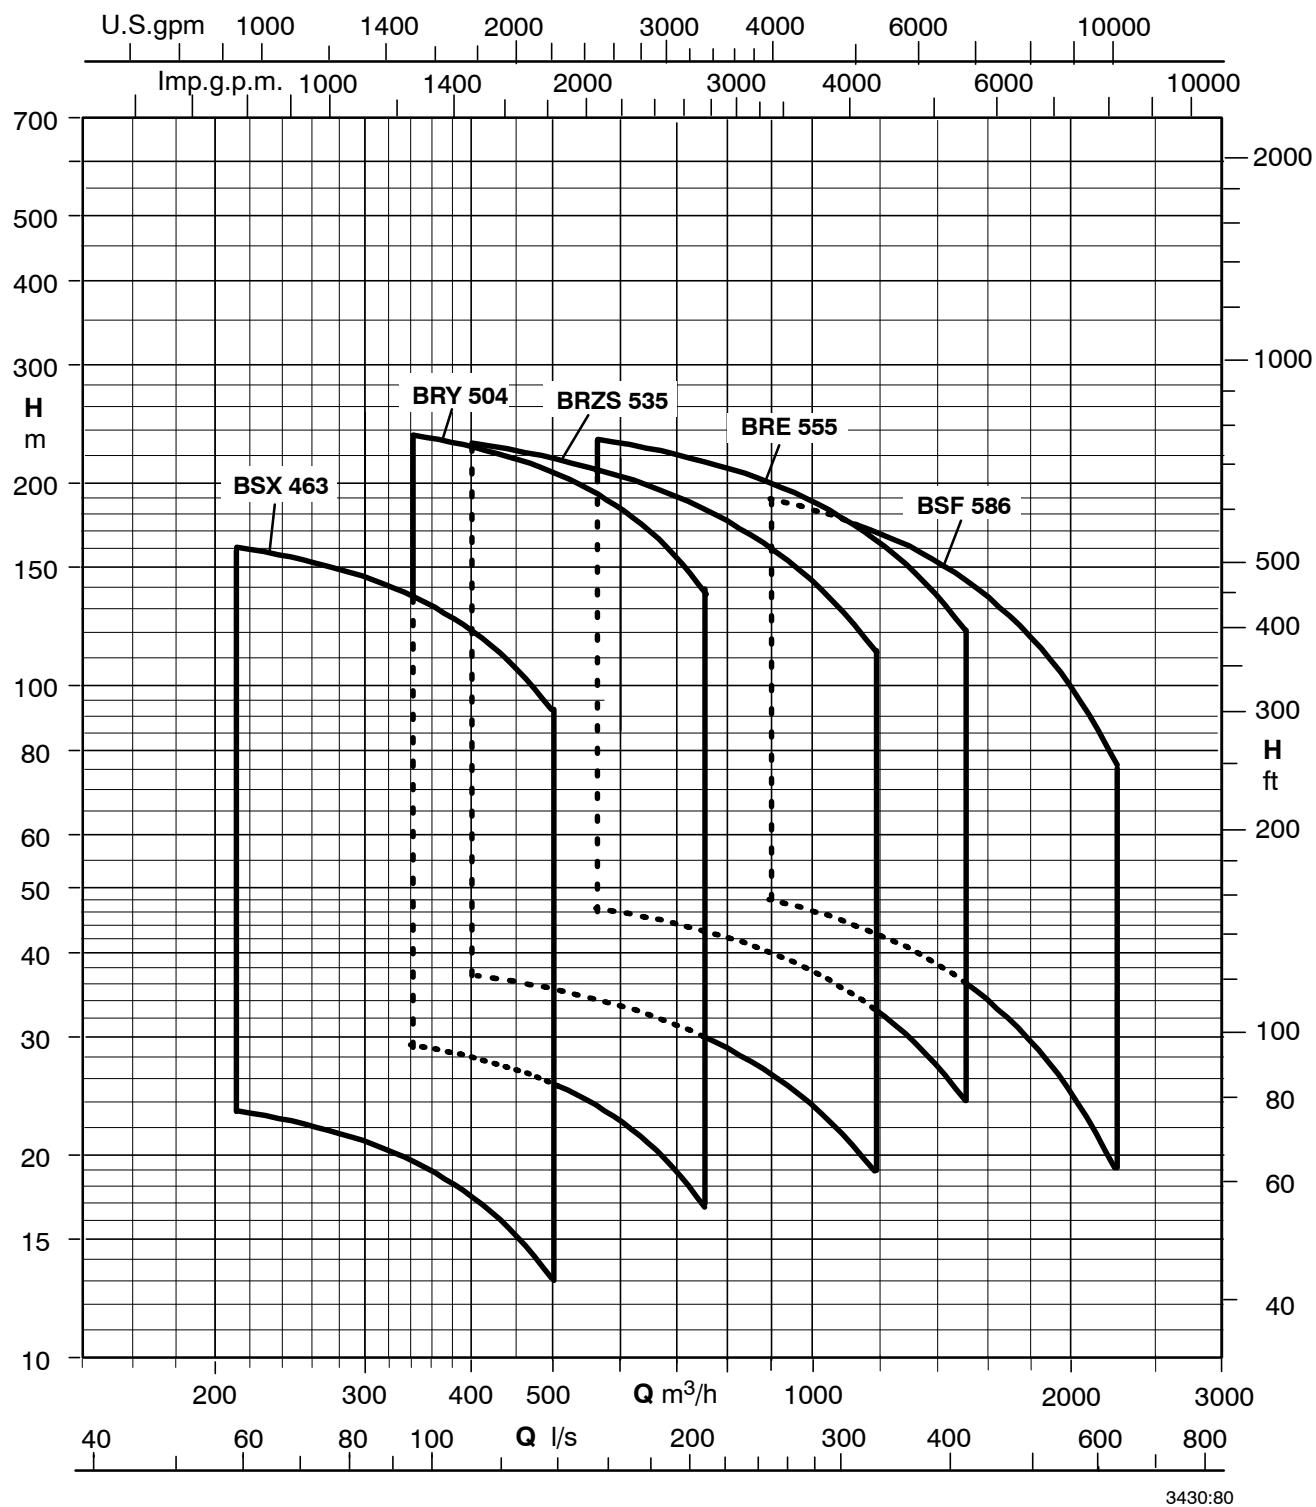

for Well Diameters of  
400 mm (16 inches) and above

## Product Features

- Very sturdy design
- Suitable for installation in narrow deep wells
- High efficiency
- Motor designed for maximum pump output
- Low noise level
- For vertical or horizontal installation
- Check valve protected against blocking
- Pre-filled motor; no risk of contamination of the handled water

## Selection Chart (Ranges on Offer)

 $n \approx 1450 \text{ rpm}$ 

Note: The diagram shows the  $\Delta Q_A$  range on offer. The pumps can be offered for any duty point within this flow range.

## Applications

Handling clean and raw water in applications such as:

- general water extraction / supply,
- irrigation and spray irrigation,
- lowering and maintaining ground water levels in open-cast mines,
- dewatering and gallery drainage in underground mines.

Use in pressure-boosting as well as for offshore and cavern applications, etc.

Permissible sand content in the fluid handled: 50 g/m<sup>3</sup>.

## Operating Data

Capacity	Q	up to 2,200 m <sup>3</sup> /h (612 l/s)
Head	H	up to 1,500 m
Supply voltage	U	up to 6,600 V
Temperature of fluid handled	t	up to +40 °C
Speed	n	2900 rpm and 1450 rpm

## Design

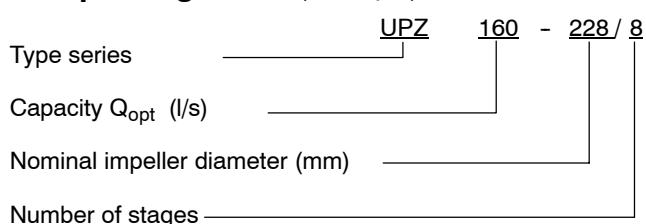

Multistage, double-entry ring-section pump with back-to-back impeller arrangement. For vertical installation. Radial and mixed-flow hydraulic systems with impellers that can be turned down.

Half the flow enters the pump through the lower suction casing, the other half through the upper suction casing. The upper half of the pump unit is surrounded by a pressure shroud (outer shell). The two flows are collected by the channel created by the shroud and carried into the upper suction casing, which is equipped with two discharge branches. This configuration is designed to ensure full axial thrust balancing. The casing components (stage casings) are connected by means of round tie bolts. The two suction casings are equipped with strainers to protect the pump from coarse particles in the fluid.

Flanged pump end. Check valve with flanged end available on request.

Particularly suitable for installation in narrow deep wells.
